Strength through networking

Switzerland has always owed its success to close networking. It recognised early on that international cooperation is crucial for overcoming global challenges. The importance of networking with Europe is hardly more evident than in the energy system: the European interconnected grid, which began in Switzerland with the visionary «Star of Laufenburg» project, now forms the foundation for ensuring a high level of security of supply throughout Europe.

In order to guarantee Switzerland's security of supply in the medium to long term, the country needs a stable grid, sufficient energy in Switzerland and cooperation with its European partners. Following the Federal Council's decision in May 2021 to end its negotiations with the EU regarding a framework agreement, the conclusion of an electricity agreement has become a distant prospect. The EU rules for grid and market operation are diverging further and further from the equivalent Swiss regulations: without an electricity agreement and without appropriate provisions in ongoing Swiss legislative proposals such as the consolidation legislation, formally different rules apply on each side of the border.

A purely physical connection with Europe without including Switzerland in the mechanisms and processes of the electricity market jeopardises not only grid operating security, but also the security of supply in Switzerland. Firstly, sufficient flexible power must therefore be made available to stabilise the

grid, and secondly, there must be enough energy to meet demand all year round. This is particularly the case because Switzerland, like many European countries, has decided to promote renewable energies. The country is already dependent on imports in the winter months, as consumption at this time of year cannot be covered by domestic production. In addition to close networking with Europe, the rapid expansion of domestic production in winter is therefore essential for Switzerland's security of supply, as well as for the successful implementation of the Energy Strategy 2050. The necessary legal framework must be created to ensure this.

The consolidation legislation under which the Federal Council has combined the revised Energy and Electricity Supply Acts, and which has been under discussion in parliament since the beginning of 2022, is a step in the right direction for Swissgrid. However, the proposed measures do not go far enough in light of the restrictions on imports. For this reason, Swissgrid has worked with leading electricity companies to develop and present market-based legal solutions. From the energy industry's point of view, this requires measures such as adequate reserves, incentives for maintaining and expanding domestic renewable production capacities, and a regulated relationship with the EU.

In addition, Swissgrid is active at European level: the company signed agreements with the transmission system operators of the «Italy North» capacity calculation region at the end of 2021. This makes it possible to continue to cooperate with European partners from a technical perspective. However, agreements between transmission system operators are not an adequate substitute for an electricity agreement. Since the conclusion of an agreement is not possible in the foreseeable future, Swissgrid is proposing a purely technical, intergovernmental agreement as an interim solution. Yet an electricity agreement remains the most efficient and effective solution to guarantee a reliable supply of electricity in Switzerland. After all, the high availability of the transmission grid must continue to be ensured in the future. Despite recent challenges such as the coronavirus pandemic and the lack of an electricity agreement, Swissgrid was able to guarantee an exceptionally high level of availability of its grid infrastructure in 2021 – without any supply disruptions at all at transmission grid level.

Sixty years after the introduction of physical networking, the energy system is now undergoing another radical change with the introduction of digital networking. Digitalisation offers grid operators new opportunities to master the increasingly decentralised and complex energy system. Among other things, Swissgrid has conducted pilot projects concerning the application of data science in grid operations and has tested the use of 3D visualisations, augmented reality glasses and drones for infrastructure management. These are further steps on the company's path to enhance innovation and digitalisation.

Rainer Mühlberger, Head of the Technology business unit, made his mark on the company thanks to ground-breaking developments in the field of information technology and major transformation projects. He decided to retire from the Executive Board in 2021 and will now develop the 2027 corporate strategy as Senior Strategic Advisor. Swissgrid was able to recruit Konrad Zöschg as its new CIO. He took up his position in August.

We would like to sincerely thank Rainer for his great dedication and wish Konrad a warm welcome to the company. A big thank you also goes to all the staff who did an exceptional job in 2021 despite the ongoing coronavirus pandemic.

Adrian Bult
Chairman of the Board of Directors

Yves Zumwald
CEO

Annual Report

Year in review

Despite the ongoing uncertainties caused by the coronavirus pandemic, Swissgrid was able to press ahead with its core business in 2021: secure grid operations, maintenance and modernisation of the transmission grid. In addition, Swissgrid used the past reporting year to continue developing innovative solutions. The failure of the framework agreement nevertheless makes cooperation with Europe even more challenging.

Swissgrid is responsible for one of the most critical infrastructures in Switzerland. To ensure the smooth operation of the transmission grid in the second year of the pandemic, it was crucial for Swissgrid to continue to protect the health of employees. Its processes worked perfectly.

The changing energy system also places new demands on grid operators. Its growing complexity and the decentralisation of electricity generation require new and networked approaches. The development and implementation of such solutions was a focus for Swissgrid in the year under review: the Austrian grid operator APG was acquired as a new partner for the Equigy crowd balancing platform. This platform, which Swissgrid founded with TenneT and Terna in 2020, takes advantage of blockchain technology to make it easier to bundle and control small, flexible energy resources and to use them to stabilise the grid. In the second quarter of the year, Swissgrid also launched a pilot project with ewz to test how these resources can be integrated as efficiently as possible.

Digital solutions are opening up interesting opportunities within the company as well. In 2021 Swissgrid gained experience in the application of data science and artificial intelligence and, among other things, carried out a pilot project to predict feed-ins and feed-outs in the transmission grid. Swissgrid has recognised the potential of this novel approach and intends to use it to optimise forecasts and decision-making in market and grid operations going forward.

Picture gallery: Innovation projects at a glance

More efficiency in maintaining and expanding the grid infrastructure

Swissgrid uses digital technologies not only for grid operations, but also for modernising and maintaining the grid infrastructure: computer-generated 3D visualisations help Swissgrid to plan grid expansion measures. In cooperation with ETH Zurich, the company has developed the «3D Decision Support System», which analyses and maps all the factors relevant to planning line routes, such as environmental protection, regional planning and technology. The 3D models help decision-makers, lead to more transparency and simplify communication with the affected stakeholders. The software is already being used in grid projects between Flumenthal and Froloo and between Innertkirchen and Mettlen.

To inspect its pylons, last year Swissgrid tested drones with embedded sensors that scan the pylons for

corrosion analysis. The automated process is more efficient and safer because it does not require any physical controls and the lines do not have to be switched off. Swissgrid is investigating how augmented reality (AR) can be used for inspecting substations in the future. In a pilot project with the ETH spin-off Rimon Technologies GmbH, the Mettlen substation was modelled in 3D and integrated into AR glasses along with information about the inspection process. The application provides the inspector with an image of the substation overlaid with additional images, information and film sequences.

Thanks to technological developments such as «Dynamic Line Rating», Swissgrid is able to better exploit the existing grid infrastructure. Radio sensors mounted directly on the conductors continuously determine the intensity of current, temperature, angle of inclination and acceleration. The maximum electricity volume that can flow through the conductors can be flexibly determined on the basis of this real-time data, combined with local weather forecasts,. Up to now, three static seasonal limits were specified for each line.

All these efforts are part of Swissgrid's strategy to use digitalisation to increase efficiency and effectiveness in the management of its infrastructure and plants. The goal is to constantly increase the quality and availability of the infrastructure.

Preparing for the dangers of digitalisation

Digitalisation brings not only opportunities, but also risks. Nowadays, grid operators must be ready for increasingly complex attacks on their IT infrastructure. For this reason, Swissgrid made additional investments in security in 2021: firstly, the company is strengthening its defence mechanisms against cyber-attacks, and secondly, preparations are being made for potential disturbances. Consequently, plans and processes are in place to restore the affected IT systems in a timely manner while continuing to carry out the company's core mission.

Swissgrid pursues an integral approach to security that encompasses other domains in addition to information security: health & safety, operational, physical security and business continuity management. In 2021, Swissgrid introduced the Safety Culture Ladder (SCL), an assessment method that can be used to measure and strengthen general safety awareness within the company. Service providers for whom occupational safety plays a key role must also introduce the SCL method in the future. A positive safety culture is essential to enable Swissgrid to fulfil its mission: secure operation of the Swiss transmission grid.

Very high availability of the Swiss transmission grid

In the year under review, Swissgrid ensured the extremely high availability of its grid infrastructure: the transmission grid did not cause a single supply disruption. However, two major incidents were recorded in the European interconnected grid in 2021: in the early afternoon of 8 January 2021, the grid frequency briefly dropped to 49,745 hertz. This was caused by the automatic disconnection of a 400 kV busbar in the Ernestinovo substation in Croatia, leading to a cascade of trips on other lines in Croatia, Hungary, Bosnia-Herzegovina and Serbia and ultimately to a grid separation in the continental European synchronous zone. As Coordination Centre South, Swissgrid coordinated the synchronisation of the grids, which was completed within one hour thanks to excellent cooperation between the grid operators. On 24 July 2021, there was another grid disconnection in continental Europe – between the Iberian Peninsula and the border region of Perpignan in France. The disturbance had no effect on Switzerland and was also resolved within one hour.

The integration of the new KOSTT control area into continental European processes, headed by

Swissgrid as Coordination Centre South in 2021, has helped to increase grid security in Europe. The control block, consisting of the zones in Kosovo and Albania, is now included in processes including schedule management and real-time monitoring.

In order to be able to cope with the growing demands on system operations, Swissgrid is setting priorities not only at European level, but also within the company: with the «System Operations» vision, Swissgrid aims to boost personnel in this area, standardise and optimise processes and promote digitalisation.

Progress on «Strategic Grid 2025» construction projects

It is not only system operations that must function smoothly to achieve reliable operation of the transmission grid, but also the infrastructure. Grid expansion and upgrades progressed rapidly in 2021.

Swissgrid reached milestones in important grid projects in the Swiss Alps. Most of the pylons for the line between Chamoson and Chippis have been erected, and the drilling of a tunnel for the underground cable connection of the line between the La Bâtiaz substation and Le Verney in Martigny has been completed. In 2021, Swissgrid also began construction of the last section of the extra-high-voltage line between Mörel-Filet and Ulrichen. Part of the new connection has already been in operation since 2019. In the canton of Graubünden, Swissgrid is replacing and reinforcing the pylons on the line between Pradella and La Punt.

Picture gallery: Milestones in grid projects

The implementation of «Strategic Grid 2025» will safeguard the transportation of energy from the power plants in the Alps to the consumption regions, strengthen the connection to the European grid and eliminate existing bottlenecks in the grid. Grid planning also involves the expansion and upgrade of substations and transformers. In 2021, Swissgrid commissioned the new gas-insulated switchgear in Innertkirchen. Construction also started on the new building in Ernen. The new substation will replace the old plant in Fiesch and prevent the line from crossing the valley, which will relieve the burden on residential areas. Swissgrid temporarily put the new transformer in the Mühleberg substation into operation for test purposes in 2021. Combined with the voltage step-up of the line between Bassecourt and Mühleberg, this will allow Swissgrid to increase the import capability and thus ensure long-term reliability of supply in central Switzerland.

Grid projects in protracted proceedings

Before a grid project can go ahead, it must go through the federal approval and authorisation process, which can take around 15 years, or often even longer. Swissgrid is committed to ensuring that the modernisation of the grid can be accelerated via efficient authorisation procedures.

Several projects are currently undergoing the sectoral plan or planning approval procedure. In 2021, Swissgrid submitted applications to the Swiss Federal Office of Energy regarding the sectoral plan procedures for the lines between Marmorera and Tinizong and between Innertkirchen and Mettlen. As far as the planning approval procedure is concerned, Swissgrid is awaiting the construction permit for grid projects between Airolo and Lavorgo, between Chippis and Mörel and between Bickigen and Chippis, among others. Legal proceedings will follow if objections are lodged against these projects. Proceedings were completed in 2021 for the important project between Bassecourt and Mühleberg. The Federal Supreme Court confirmed the voltage step-up and rejected all the objections raised.

The connection between Airolo and Mettlen is a pioneering project. Swissgrid will dismantle the existing connection over the Gotthard Pass and route it as a cable line through the new road tunnel. This bundling of infrastructures will allow an overhead line to be dismantled over a length of 23 kilometres consisting of more than 60 pylons. The project is currently in the planning phase.

Significant management of the existing grid

Professional maintenance and constant renewal of the grid infrastructure is essential to ensure the smooth functioning of the transmission grid. In 2021, for example, Swissgrid replaced insulators and conductors on the line between Lavorgo and Musignano in Italy, which is more than 50 kilometres long. Close coordination with neighbouring countries is important for this type of cross-border project as it involves switching off the line, which is a measure that has to be included in European grid operation planning. In order to be able to reduce shutdowns of this kind in the future, in the course of 2021 Swissgrid tested live renovation work – specifically the replacement of insulators on a pylon in Wimmis. The pilot test went flawlessly, and Swissgrid will now go on to evaluate further applications.

Swissgrid also carried out numerous repairs in 2021. These included more than 200 tasks such as mast base renovation, the application of corrosion protection and the replacement of components. Another example is the replacement of two pylons on the line between Fionnay and Riddes, which had slipped slightly according to geological data. Swissgrid works closely with technical experts to assess natural hazards and to take the necessary countermeasures.

In order to be able to meet the increasing need for investment in the grid infrastructure, in 2021 Swissgrid continued to press ahead with the optimisation of processes, as decided in 2018. This includes, among other things, the strengthening of areas such as portfolio planning, grid construction projects, and protection and station control technology.

Kick-off for the grid of the future

In addition to managing the current infrastructure, long-term planning is essential to allow Swissgrid to cope with the changing demands that will be placed on the grid in the future. In 2021, the Swiss Federal Office of Energy presented the «Scenario Framework Switzerland» (SZR CH), which sets out various scenarios concerning the future development of utility power generation and consumption, storage and cross-border capacities. The Federal Council will approve the SZR CH in 2022 following a consultation process. In parallel, the distribution grid operators are regionalising the national specifications. Swissgrid is preparing its «Strategic Grid 2040» on the basis of the SZR CH and the regionalised data, and coordinating with the distribution grid and European transmission system operators. Publication will take place in 2024, following a review by the Swiss Federal Electricity Commission ElCom.

Contracts as the basis for good cooperation

Swissgrid works closely with its partners in the industry not only for grid planning, but also for market and grid operation. This cooperation is laid down in various contracts, which are updated and adapted at regular intervals. In 2021 Swissgrid and the industry in general revised and signed contracts for automatic start-up and island operation capability.

Following the signing of the «Synchronous Area Framework Agreement» (SAFA), the new framework agreement regarding operation of the continental European interconnected grid, in 2021 Swissgrid started implementing the observability area and drafting the corresponding standard contract. The aim of the observability area is to establish data exchange for grid operational planning and management

with the distribution grid operators and to increase operational reliability as a result.

SAFA also has an influence on the framework agreements for system services, which started being updated in the past reporting year. In particular, however, the revision concerns the technical and operational requirements that must be met for participation in the European control energy platforms MARI and PICASSO, which will be launched in 2022. Access to these platforms is particularly important for system security, as it will allow Swissgrid to access a larger supply of short-term control reserves.

Exclusion of Switzerland – Swissgrid’s commitment to new solutions

Due to the lack of an electricity agreement, Swissgrid’s participation in control energy platforms such as MARI and PICASSO is under severe threat, as is its participation in the TERRE platform, which it has been involved in since autumn 2020.

In 2021, the EU Commission and regulators asked the transmission system operators involved to exclude Swissgrid from these platforms. Pressure also grew to no longer allow Swissgrid to participate in the imbalance netting platform IGCC. Swissgrid has filed an action for annulment with the Court of Justice of the European Union against the exclusion from some of the existing and planned control energy platforms demanded by the EU Commission. The aim of the lawsuit is to protect Swissgrid’s rights to participate in the platforms and to obtain legal certainty regarding responsibility for the consequences of its exclusion.

The lack of a political solution between Switzerland and the EU not only affects participation in the platforms relevant to control reserves, but also Switzerland’s involvement in other important European processes. For example, Switzerland is not part of the capacity calculation regions or coupled electricity markets. This means that Switzerland’s grid elements are not sufficiently taken into account in the calculation of capacities for transnational electricity trade. This increases the risk of unplanned electricity flows. Thanks to the signing of the SAFA agreement, however, Swissgrid can now not only implement the observability area, but also negotiate agreements with the transmission system operators in the «Italy North» and «CORE» capacity calculation regions. This means that from now on, Swissgrid will be involved in cross-border capacity calculation methods, as well as in redispatch and security coordination processes, but remains excluded from market coupling. Swissgrid concluded an agreement with the transmission system operators in the «Italy North» region in 2021. Negotiations with the «CORE» region are much more complex, as many more transmission system operators are involved, some with less close ties to Switzerland.

The Clean Energy Package resulted in changes in the coordination of pan-European grid operations in 2021. New grid operation regions, referred to as System Operation Regions (SOR), were defined. Due to the lack of an electricity agreement, Swissgrid is excluded from these SOR, but can at least participate as an observer thanks to a cooperation agreement. Regional coordination centres will be established for the SOR in the future, formed from former security coordination bodies such as Coreso and TSCNET. As a current shareholder of TSCNET, Swissgrid is currently endeavouring to find a way to continue to play a role in shaping TSCNET.

Challenges increase sharply in the medium term

Despite Swissgrid’s efforts to reduce the risks to Swiss grid security, the challenges facing the company will increase sharply by 2025. For example, the transmission system operators in continental Europe must implement the EU’s requirements to make 70% of cross-border capacity available for electricity trading by this date. Similarly, the EU plans to merge the two «Italy North» and «CORE» capacity

calculation regions by 2025 and to extend the coupled electricity market to these regions.

This will have serious consequences for Switzerland: it has not yet been clarified whether the load flows between EU and non-EU states may be taken into account in the capacity calculations once the 70% rule has been fully implemented. If this proves not to be the case, Switzerland's neighbours could be forced to restrict their border capacities towards Switzerland. This would be particularly problematic in winter, as Switzerland imports up to 40% of its electricity consumption at this time of year. Swissgrid is also expecting higher volatility in the electricity market and thus an increase in unplanned electricity flows through Switzerland.

Swissgrid remains committed to finding a way to work with its European partners on a technical level. However, agreements between transmission system operators are not an adequate substitute for an electricity agreement. This is because this type of contract must be approved by the EU authorities. Swissgrid considers that a purely technical, intergovernmental agreement would make sense as an interim solution. This would ensure that Switzerland is included in European platforms and processes, leading to a reduction in unplanned flows and thus to higher or at least constant border capacities. However, an electricity agreement is the only way to create a stable framework for long-term cooperation with the EU and thus a high level of reliability of supply in Switzerland.

International cooperation on sustainability

Despite these challenges, Swissgrid is constantly initiating projects with transmission system operators in Europe. In 2021, the company launched an initiative with Amprion, APG, Elia, RED, RTE, TenneT and Terna that aims to contribute to the decarbonisation of the energy supply system. By mid-2021, a position paper had been published on how greenhouse gas emissions can be reduced in the companies themselves on the one hand, and in their value chains on the other.

Swissgrid intends to anchor the principle of sustainability even more firmly within the company. In the past reporting year, the company had already decided to gear its procurement system towards sustainability. As far as ecology is concerned, the creation of small structures under pylons was promoted in cooperation with nature conservation organisations. Swissgrid also implements numerous measures for its employees: the company was again awarded the «Fair Compensation» certificate, for example. At the same time, Swissgrid has become a member of profawo to help employees to achieve a good work-life balance. In 2021, the management successfully completed a 18-month development programme in leadership and management, which was organised in cooperation with the University of St. Gallen.

Completion of the grid takeover by Swissgrid

In the past reporting year, Swissgrid completed the grid takeover required by the Electricity Supply Act. Since 2013, the assets of the extra-high-voltage grid have been gradually transferred from the former owners to Swissgrid. The value of the individual assets could not be conclusively determined on the relevant transaction dates, as the associated proceedings were still pending between the owners and EICOM. EICOM issued a ruling on the final regulatory values at the beginning of 2021. This resulted in an increase of CHF 126 million in Swissgrid's non-current assets.

In order to compensate the former owners for the higher value of the assets, Swissgrid placed several bonds with a total volume of CHF 360 million on the capital market in 2021. Some of the proceeds from the bonds were used to partially refinance convertible bonds and to finance ongoing investments.

Swissgrid will continue to access the capital market in future.

Annual Report

Sustainability

Thinking about tomorrow today

Swissgrid has always taken a long-term approach to its business activities. In order to be able to continue operating the Swiss transmission grid securely in the future, it is necessary to anticipate changes in technology, energy policy and society at an earlier stage and to adapt the infrastructure, investments and actions accordingly.

As the national grid company, Swissgrid plays a key role in the energy system and can therefore make a significant contribution to the implementation of the Energy Strategy 2050 and help ensure a secure and sustainable supply of electricity.

Embedding sustainability in Swissgrid's strategy

There are currently numerous initiatives and activities under way in various business units at Swissgrid that follow the principles of sustainable corporate development. The company will focus even more on sustainability going forward.

Swissgrid will develop its vision and future strategy for corporate social and environmental responsibility as part of its 2027 corporate strategy. The expectations and demands of the stakeholders will be analysed for this purpose, and the company will define which Sustainable Development Goals (SDGs) it will contribute to in the future. These are goals agreed on by the UN member states, including Switzerland, to be achieved by 2030. The SDGs include ecological, economic and social dimensions of sustainable development. At the same time, Swissgrid will set up a sustainability reporting. Swissgrid will also develop a specific climate reporting. This is due to the new non-financial reporting requirements for companies in Switzerland.

Until the publication of the first sustainability report, Swissgrid provides insights into existing measures in the area of sustainability in its annual report. The focus in the past reporting year was on employees.

As at 31 December 2021, Swissgrid had a total workforce of 637 people (without trainees and apprentices). 79 new employees joined the company in 2021. Capacities were increased in areas including grid project planning and maintenance, grid operations and cyber-security.

Positioning as an attractive employer

Swissgrid relies on highly qualified and motivated employees to fulfil its legal mandate. The company launched a comprehensive employer branding campaign in 2020. This is intended to raise the company's profile as a progressive employer among potential employees and to address candidates in a more targeted manner. The focus of the campaign is on people in sought-after areas that are difficult to fill such as IT & telecommunications, grid management and modernisation and grid operations, as well as on high potentials.

Attracting and promoting young talent

Swissgrid's profile has improved further as a result of employer branding, a commitment to promoting young talent and a greater presence at university events. In the Universum Study 2021, a survey of

11,860 students on the most attractive employers, Swissgrid came 18th in the «Engineering» category (previous year: 33rd), 52nd in the «IT» category (previous year: 58th) and 46th in the «Natural Science» category (previous year: 58th).

In 2021, 25 students (previous year: 18) started an internship at Swissgrid. This is increasingly becoming an important tool for recruiting young talent. Of the 35 students at the company between 2018 and 2020, 22 remained employed by Swissgrid.

Commitment to existing employees

Swissgrid not only wants to attract good employees, but also to retain them. With that in mind, the company invests in the further training of its staff. In 2021, a 18-month development programme in the areas of leadership and management, which was conducted in cooperation with the University of St.Gallen, was completed successfully. The 120 participants consisted of senior managers and junior staff. Systematic succession planning is also a priority for Swissgrid: in 2021, 11 out of 15 (in 2020: 16 out of 22) vacant management positions at all management levels were successfully filled by internal talent.

Swissgrid supports its employees' efforts to reconcile their professional and private needs and also allows them to carry out their duties on a part-time basis. Since 2018, all full-time positions have been advertised with a workload of 80 to 100%. In 2021, 21.1% of the workforce worked part-time, with men accounting for 13.9% and women 48.5%. Swissgrid makes it easier for fathers to look after their children after their birth: since 2021, the company has offered 15 days of paternity leave. Swissgrid has also become a member of profawo. This organisation aims to help employees to achieve a good work-life balance by supporting, coordinating and arranging care services.

Diversity at Swissgrid – consistently pursuing the chosen path

Swissgrid's employees make a significant contribution to ensuring that the transmission grid remains secure and reliable. Employee diversity forms the basis for the company's broad expertise, its innovative strength and close networking with the industry in Switzerland and abroad. Swissgrid offers an open environment to attract and retain highly qualified and motivated talent.

The company is clearly committed to diversity and inclusion in terms of nationality, ethnic origin, gender, sexual orientation, age, culture and religion. One of Swissgrid's goals is to strengthen diversity and cooperation within teams. In the medium term, Swissgrid is striving in particular to achieve a balanced relationship between the generations and the sexes and to boost the proportion of women in management and expert positions. In 2021, the proportion of women stood at 21% (2020: 19.6%), and represented 12.2% at management level (2020: 10.7%). The company employs people from 28 different nations.

Swissgrid was awarded the «Fair Compensation» certificate once again in 2021. This confirms that pay equity exists between women and men – according to the principle of equal pay for work of equal value. The relevant audit is carried out by the Swiss Association for Quality and Management Systems. Swissgrid will continue to conduct pay equity analyses in the future to ensure pay equity between women and men.

High employee satisfaction

The 2020 employee survey shows that Swissgrid is on the right path to becoming an attractive employer. Firstly, the participation rate was very high: over 85% of employees completed the survey.

Secondly, the company was rated in the top 5% of employers for the targets «overall satisfaction» and «commitment». The result is an incentive to consistently continue on the chosen path.

Financial Report

Management Report

This Management Report covers both the requirements pursuant to Art. 961c CO (Code of Obligations) in connection with the statutory financial statements as well as the provisions on the «Annual Report» relating to the financial statements in accordance with Swiss GAAP FER (Swiss GAAP FER framework concept, paragraphs 7 and 34).

Regulatory business model

Legal and regulatory environment

The electricity industry's value chain can basically be divided into the following areas: electricity generation, electricity transmission, electricity distribution and electricity consumption. As the owner and operator of Switzerland's extra-high-voltage grid, Swissgrid is responsible for electricity transmission.

The high investments for the construction of the transmission system, rising economies of scale (in view of falling marginal costs) and high irreversible costs result in a natural monopoly in the area of electricity transmission. This has been structured as a legal monopoly by the legislator based on the Electricity Supply Act (StromVG) and the Electricity Supply Ordinance (StromVV).

The Federal Electricity Commission ElCom oversees compliance with the Electricity Supply Act and the Electricity Supply Ordinance. It is the independent state regulatory authority in the electricity industry and is allowed to issue rulings where necessary, against which there is a right of appeal to the Federal Administrative Court with the possibility of appeal to the Federal Supreme Court.

Given the public interest in the secure national supply of electricity, the resulting legislation and relevant supervision by the regulator, Swissgrid's business activities are overwhelmingly subject to strict regulation.

Business activity

As the National Grid Company, Swissgrid is responsible for the non-discriminatory, reliable and efficient operation of the transmission grid as well as its sustainable and efficient maintenance. The renovation and demand-driven expansion of Switzerland's extra-high-voltage grid are also considered amongst the company's most important tasks.

Swissgrid also provides additional services, such as balance group and congestion management or ancillary services (AS) as part of the European and Swiss grid operations. In addition to representing national interests, Swissgrid makes an important contribution to ensuring the secure supply of electricity for Switzerland.

Cost-plus regulation

Swissgrid's legal mandate and business activities expose the company to costs that can be passed on to the lower grid levels and end consumers in the form of tariff revenues if the regulator deems the costs to be chargeable. ECom has the right to verify ex post the chargeability of Swissgrid's costs for tariff-setting purposes.

Chargeable costs include the operating and capital costs of maintaining a secure and efficient grid. Chargeable costs also include an adequate operating profit. As a result, this is referred to as «cost-plus» regulation: «cost» stands for the cost recovery principle and «plus» stands for the operating profit.

Chargeable operating and capital costs

Chargeable operating costs include the costs for services directly related to the operation of the grid. Examples include costs for maintaining the grid, costs for providing the ancillary services, personnel expenses, costs for materials and third-party supplies as well as direct income taxes.

Chargeable capital costs include depreciation/amortisation and imputed interest. The amount of imputed interest is directly dependent on the assets required to operate the grid (invested operating assets, IOA) and the applicable regulatory interest rate ($WACC_{t+0}$). $WACC_{t+0}$ means that the WACC specified for this year also applies to the current financial year.

In particular, the IOA consists of the transmission grid assets (including construction in progress), intangible assets as well as the net current assets determined on a monthly basis.

Volume- and tariff-related timing differences

Swissgrid calculates the required tariff revenues ex ante based on budgeted costs (operating and capital costs). Volume and price differences between the «actual» situation for a year and the «budgeted» situation for the same year regularly lead to differences between the actual costs and actual income for a year. These differences are referred to as volume- and tariff-related timing differences and are rectified over the coming years. If effective costs exceed the tariff revenues for the same year, this results in a deficit. This deficit can be eliminated over subsequent years by increasing the tariff.

By contrast, if tariff revenues exceed effective costs for the same year, this results in a surplus, which must be used to reduce tariffs over subsequent years.

Volume- and tariff-related timing differences are also subject to interest at the WACC rate and have an impact on capital costs. In contrast to the IOA, volume- and tariff-related timing differences are subject to interest at $WACC_{t+2}$. Deficits increase capital costs, while surpluses reduce them.

Profit regulation

The legal framework in place for Swissgrid means that the EBI (earnings before interest) of the regulated business area is essentially a multiplication of the invested operating assets (IOA) with the capital cost rate ($WACC_{t+0}$) and the interest applied to the volume- and tariff-related timing differences ($WACC_{t+2}$). Additional profits may arise from Swissgrid's unregulated business area.

The EBI is then used to compensate Swissgrid's stakeholders via interest on liabilities and return on equity (dividends and/or profit retention). The cost-plus regulation therefore leads to a return in the

amount of the capital cost rates to be applied.

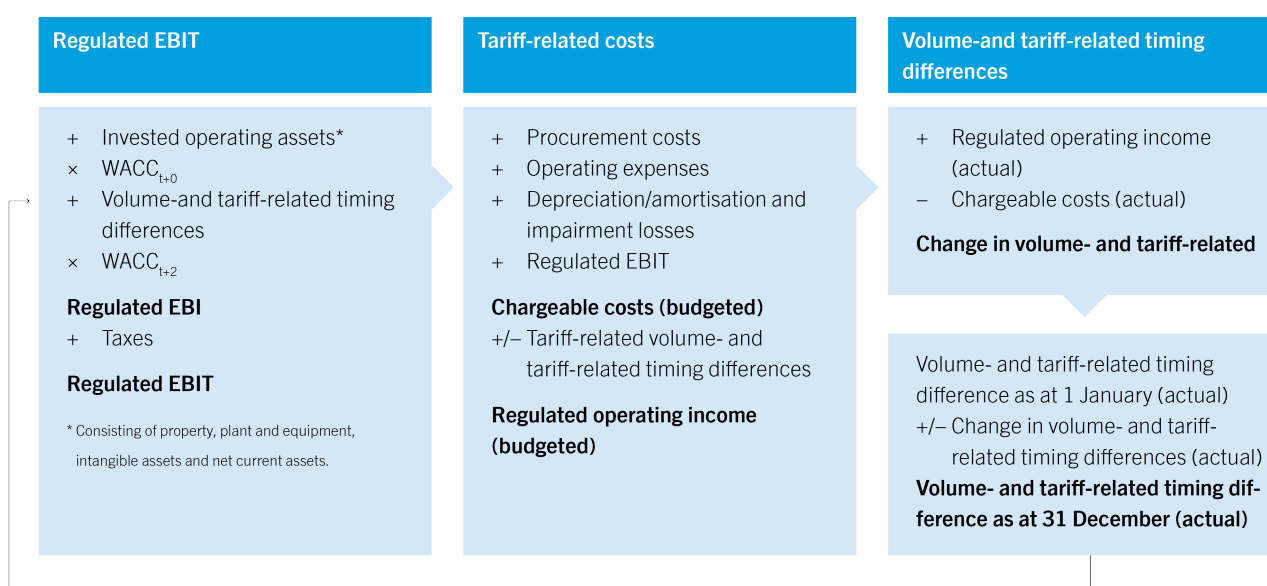

Imputed capital cost rate (WACC)

The WACC is an imputed interest rate defined annually based on the electricity supply legislation. It applies equally to all grid operators.

The WACC is calculated methodically taking account of the current Best Practice guidelines provided by the Federal Department of the Environment, Transport, Energy and Communications (DETEC). The methodology was developed specifically for the regulation of electricity grid operators and intends to ensure security of investment for these operators. With regard to the financing structure, the WACC calculation assumes an equity share of 40 per cent and a borrowed capital share of 60 per cent. Specific thresholds apply for the individual capital cost parameters.

As the WACC represents an imputed interest rate for the electricity industry, Swissgrid's actual capital costs are not included in the tariff calculation. On the other hand, this means that Swissgrid is responsible for determining how the imputed interest received via the tariffs is distributed to shareholders and lenders.

Illustration of the regulatory business model

Business performance (values pursuant to Swiss GAAP FER)

Procurement costs

At CHF 417.5 million, procurement costs are CHF 189.0 million higher than the previous year's value of CHF 228.5 million. This increase is primarily due to higher costs of CHF 161.4 million for control power provision and AS energy in the general ancillary services segment as well as higher procurement costs of CHF 23.3 million for active power loss. The increase in these costs is primarily due to rising electricity prices in the second half of 2021. In the grid utilisation segment, additional remuneration to former transmission system operators rose by CHF 24.6 million compared to the previous year. By contrast, national redispatch costs in the grid utilisation segment and expenses for grid enhancement in the

general ancillary services segment decreased by CHF 13.4 million and CHF 5.4 million respectively in relation to 2020.

Operating expenses and depreciation/amortisation

Operating expenses rose by CHF 3.6 million year on year, from CHF 224.8 million to CHF 228.4 million.

At CHF 94.5 million, costs for materials and third-party supplies remained unchanged from the previous year. In the 2021 financial year, remuneration for easements, including easement management services performed by third parties, declined by CHF 7.8 million year on year. By contrast, expenses for projects, advisory services and non-cash benefits increased due to the implementation of Strategy 2022 measures. The implementation of Strategy 2022 includes measures to secure the supply of electricity and improve the safety of people, systems and the environment. For the same reason, personnel expenses increased by CHF 4.4 million compared to the previous year. The annual average number of full-time equivalents in 2021 amounts to 582.4 FTE (previous year: 540.4 FTE).

The scheduled depreciation/amortisation on property, plant and equipment and intangible assets amounted to CHF 179.0 million in 2021, an increase of CHF 24.2 million on the previous year due to the rise in non-current assets.

Revenue and volume- and tariff-related timing differences

For the 2021 financial year, net turnover across all segments amounts to CHF 715.1 million. This represents an increase of CHF 126.9 million in relation to the previous year's figure of CHF 588.2 million.

The rise in turnover is predominantly due to the CHF 65.3 million increase in tariff revenue as well as higher income from auctions for the reduction of chargeable grid costs of CHF 61.1 million in the grid utilisation segment. In addition, the general ancillary services segment recorded growth in income of CHF 28.9 million from balance group balance energy. By contrast, tariff income in the active power loss segment decreased by CHF 29.0 million.

In the 2021 financial year, the operating business activities reported net deficits (cumulative surpluses less cumulative deficits) of CHF 279.7 million (previous year: CHF 107.9 million). In particular, the grid utilisation and general ancillary services segments posted deficits of CHF 122.6 million and CHF 150.6 million respectively due to the higher procurement costs.

As at 31 December 2021, a net deficit of CHF 326.3 million exists (previous year: CHF 55.1).

EBIT, financial income and net income

Earnings before interest and taxes (EBIT) from activities relating to the Federal Electricity Supply Act (StromVG) are equivalent to the interest applied to the assets required to operate the transmission system using the weighted average cost of capital rate (WACC) for the current year under review (= $WACC_{t+0}$) and the interest applied to the volume- and tariff-related timing differences using the weighted average cost of capital rate of $WACC_{t+2}$ plus income taxes. The weighted average cost of capital rates for 2021 ($WACC_{t+0}$) and 2023 ($WACC_{t+2}$) defined by the Federal Department of the Environment, Transport, Energy and Communications (DETEC) for the 2021 financial year remain unchanged at 3.83%. In 2021, EBIT increased by CHF 87.6 million from the previous year's value of CHF 116.7 million to CHF 204.3 million. The higher EBIT is due in particular to regulatory effects arising from the final remuneration paid for the grid takeovers. Due to the interest of CHF 30.3 million to be

paid for previous years in connection with the grid takeovers, financial expenses rose to CHF 53.5 million (previous year: CHF 26.0 million). Net income in 2021 amounts to CHF 106.2 million, up from the previous year's figure of CHF 75.7 million.

Balance sheet and cash flow statement

Total assets (excluding fiduciary positions) increased by CHF 449.5 million compared to the previous year to CHF 3.522 billion. The absolute equity base was again strengthened by the positive net income less dividends paid. Adjusted for the balance sheet items held on a fiduciary basis and volume- and tariff-related timing differences, the equity ratio on 31 December 2021 amounts to 35.7%, as compared to 39.1% on 31 December 2020. The decrease in the equity ratio is due to the higher total assets and to early refinancing to cover liquidity requirements at the beginning of 2022.

In 2021, cash flow from operating activities amounts to CHF 172.2 million, an increase of CHF 34.3 million compared to the previous year's value. This increase is due to higher net cash inflows from operating activities.

Cash flow from investing activities amounts to CHF 203.9 million in the year under review; a CHF 59.0 million increase on the previous year. This is attributable to higher net investments in property, plant and equipment and intangible assets. Despite the ongoing coronavirus pandemic, Swissgrid managed to make important progress on the grid construction projects relating to the «Strategic Grid 2025» (including the «Chamoson – Chippis» and «Pradella – La Punt» projects), thereby increasing the level of investment.

In 2021, cash flow from financing activities amounts to CHF 104.2 million (previous year: CHF –22.0 million). This was due to the refinancing measures implemented in 2021, with three bonds totalling CHF 360 million.

Risk assessment

Risk management is an integral part of effective and prudent corporate management for Swissgrid. Swissgrid's risk management covers the entire organisation, not including its subsidiaries and shareholdings. It is based on the established ISO 31000 and COSO ERM standards and meets the requirements of corporate governance as well as the requirements under Swiss law.

Objectives

The Risk Management unit assists managers at all tiers in consciously dealing with risks. This includes expedient and transparent reporting as well as managing an appropriate risk management system. Swissgrid fosters the deliberate management of risks at all levels of the company.

Organisation

The Board of Directors has defined the governance requirements for risk management and delegated its implementation to the CEO. The head of Enterprise Risk Management manages the risk management process, provides the methods and advises the operating units on risk management.

Process

The risk assessment takes place twice a year. The key risks are identified and assessed as part of a multi-stage process that includes the evaluation of risks based on the probability of their occurrence

and the extent of their impact, as well as the definition of strategies to manage said risks.

Risk monitoring, including the effectiveness and level of implementation of the measures taken, is performed as part of regular risk updates. The Executive Board and the Board of Directors receive the results of the risk assessment and the risk updates in the form of a standardised report.

Risk situation

The coronavirus pandemic is not just a risk to employee health, but also to the operation of the transmission system. The risk drivers include a shortage of employees in critical functions. In response, Swissgrid acted early to protect these employees in particular and to make up for any shortfalls.

Besides the new risks stemming from the pandemic, the other risks remain relevant for Swissgrid. The drivers for these risks are natural influences, the national and international political and regulatory environment as well as personnel and technical factors. Digitisation is enabling more efficient operation of the transmission grid, but also involves risks to grid and system security and therefore to the security of supply, given the increasing dependence on systems.

The key risk factors are:

European and regulatory environment

Swissgrid's role remains challenging at a national and international level. Due to the breakdown in negotiations on a framework agreement, the conclusion of an electricity agreement cannot be expected within a reasonable period of time. Consequently, the Swiss electricity system finds itself increasingly excluded from important processes affecting grid security in Europe. This leads to higher unscheduled flows of electricity through the Swiss grid and jeopardises both system stability and import capacity in the medium term. There is also the risk of exclusion from the European control energy partnerships as well as from ENTSO-E, the European Network of Transmission System Operators. Swissgrid is developing technical solutions and negotiating private-law agreements with other transmission system operators to ensure the stability of the grid, but is reliant on political support in this respect. Success is not guaranteed as there are political factors to resolve that fall outside the control of Swissgrid. Private-law agreements between transmission system operators are not an adequate substitute for an electricity agreement in the long term.

Security of supply

A wide-scale supply outage would cause enormous economic damage. As a result, Swissgrid must ensure that the transmission grid is available to supply electricity at all times. It is therefore essential to have an intact grid infrastructure and to secure the availability of IT and communication systems. Meeting these prerequisites can be jeopardised by, for example, technical problems, natural disasters, operating errors and criminal actions. Among other measures, Swissgrid mitigates these risks by implementing redundancies and standardised processes to eliminate faults in grid systems and in system operations. Adequate training and development of personnel ensures that employees respond appropriately.

In 2021, there were several challenging situations in the European electricity system that could have led to wide-scale supply outages if the outcome had not been favourable. As part of its cooperation within ENTSO-E, Swissgrid, in its role as Coordination Center South, investigated the events in association with the other European transmission system operators and derived measures to avoid such

situations as far as possible or to be able to deal with them more effectively.

Security of supply also depends on the availability of control and redispatch services to balance short-term deviations between production and consumption, and to control grid congestion. Swissgrid therefore works continuously to optimise the Swiss market for ancillary services, and cooperates with transmission system operators in neighbouring countries to increase market liquidity.

Swissgrid takes precautions to protect the infrastructure against physical attacks. These include securing buildings and plants as well as access control and monitoring.

The threat of cyber-attacks is steadily rising due to the speed at which technology changes (which potential attackers also exploit), the countless possible modes of attack, as well as growing system integration across companies. To reduce this risk, Swissgrid is continuously developing its processes and systems to detect cyber threats early and defend itself against them.

Swissgrid has emergency procedures in place in the highly unlikely event that infrastructures or systems fail permanently or the grid can no longer be controlled.

Grid capacity

Important activities relating to the «Strategic Grid 2025» continue to be hampered by protracted approval processes and numerous objections. This makes it more difficult to eliminate grid congestion. Swissgrid is striving to establish dialogue, particularly with local residents, during the approval process. However, given the ever-decreasing acceptance of overhead lines, Swissgrid still has to factor in objections and delayed approval processes.

The progressive ageing of existing components represents another risk to grid capacity. Swissgrid therefore systematically records the condition of its plants and prioritises modernisation measures accordingly.

Personnel safety

Swissgrid's operation and maintenance of the extra-high-voltage infrastructure involves risks to personnel safety. People can be seriously injured while performing their work. To minimise this risk to the greatest extent possible, Swissgrid systematically identifies present dangers, implements targeted protective measures, trains its own employees and instructs contractor employees so they can independently identify the dangers posed at plants and respond accordingly. Systematic controls on construction sites help to ensure compliance with site safety precautions.

Financial risks

Swissgrid's activities mean that it is exposed to various financial risks. These include liquidity, foreign currency, interest rate and counterparty risks.

Liquidity is ensured at all times by continuous planning and monitoring of the funding requirements, maintenance of minimum liquidity levels and the provision of confirmed bank credit facilities.

Foreign currency risk is reduced through natural hedging and forward exchange transactions. The hedging strategy is reviewed periodically and updated as needed.

The risk of interest rate changes is reduced by staggering the maturities and establishing a balanced

financing mix. Derivative financial instruments are deployed for further mitigation if necessary.

Financial counterparties are constantly reviewed, assigned individual limits and monitored. Operational counterparties are regularly monitored.

Future prospects

Strategic outlook

The energy sector in Switzerland is undergoing a transformation: the lack of planning reliability and the move towards decentralised electricity generation are leading to new requirements for transmission grid operations. Intelligent technologies can be very useful in this increasingly complex environment, for example to optimise forecasts in grid operations or to integrate small and flexible energy resources into the energy system that can be used to ensure grid stability. Changes in electricity generation also require an adjustment of the grid infrastructure so that grid operators can guarantee security of supply in the future. At the same time, the EU and Switzerland are modifying the political and regulatory requirements for the electricity industry. The EU is pursuing the goal of decarbonising the energy industry and creating a single European electricity market. As part of the European interconnected grid, Switzerland is directly affected by these developments.

In order to tackle these changes and trends, in 2018 Swissgrid launched Strategy 2022, which is now in its final year of implementation. The strategy aims to achieve the following long-term corporate objectives: a high level of safety and security for employees and the plants, a consistently stable and available transmission grid, the optimisation of the grid by taking innovative technical, structural and market-based measures, as well as efficient and effective business activities.

The «safety first» principle applies at Swissgrid. The Safety Culture Ladder, an assessment method that measures general safety awareness, was introduced to improve safety in the company. Swissgrid is aiming to achieve certification in 2022. The company is also continuing projects to improve physical protection and cyber-security. At the same time, the requirements of the revised Data Protection Act are being implemented.

In order to ensure a high level of security of supply in the future, Swissgrid is committed to maintaining close cooperation with its European partners. The aim is to prevent or at least delay the exclusion of Swissgrid from important European platforms and bodies due to the lack of an electricity agreement. In 2022, the focus will also be on measures in the areas of business continuity management and disaster recovery. Several radio relay links will be installed for the emergency communication network in the course of the next year.

In order to optimise the existing and future grid, Swissgrid is consistently pursuing the continued development of plant management decided on in 2018 with the aim of increasing investment in infrastructure. Two important projects to ensure security of supply will soon be commissioned: the line between Chamoson and Chippis and the connection to the Nant de Drance pumped storage power plant. This will allow energy generated from Valais hydropower to be transported to consumption centres in central Switzerland. Swissgrid is also promoting various digitisation initiatives to increase management efficiency and effectiveness. Over the next year, Swissgrid will also start planning its Strategic Grid 2040 on the basis of the «Scenario Framework Switzerland» published in autumn 2021.

Its goal is to increase efficiency and effectiveness not only in the management of the grid, but throughout the entire company. This will also involve replacing the enterprise resource planning system with an intelligent, integrated «end-to-end» solution. The project will continue to be implemented in 2022.

In the course of the next year, Swissgrid will complete the development of its Strategy 2027, which will be published in the autumn. It will focus partly on sustainability within the company. In 2022, Swissgrid will develop its vision and future strategy for corporate social and environmental responsibility as part of its 2027 corporate strategy.

Research and development

Swissgrid collaborates with national and international research institutions to ensure that it can continue performing its duties safely and cost-effectively in the future. Its project portfolio is aligned with its strategic goals, and consists of internal activities and projects being conducted in cooperation with universities and other Swiss partners.

Financial outlook

Grid investments

Investment volumes are expected to remain high due to the need to achieve a sustainable energy future and carry out the measures defined in the «Strategic Grid 2025» report. Permits for power line construction and modification continue to pose a major challenge. The budget has therefore been assigned a lower likelihood of realisation to take delays into account. Consequently, investments in the grid are expected to increase by between CHF 175 million and CHF 275 million a year over the medium term.

Operating costs

Swissgrid continues to implement its Strategy 2022, as communicated in the spring of 2018. This includes efficiency increases as well as measures to secure the supply of electricity and improve the safety of people, systems and the environment. Implementing these measures will lead to a rise in operating costs.

EBIT and net income

Based on the regulatory business model, EBIT is directly dependent on the invested operating assets (IOA) and the weighted average capital cost rate (WACC). The WACC communicated by the Federal Department of the Environment, Transport, Energy and Communications (DETEC) for 2022 remains unchanged at 3.83%. Due to one-off regulatory effects arising from the final remuneration paid in 2021 for the grid takeovers, lower EBIT and a lower net income are expected in 2022.

In accordance with the dividend policy approved by the Board of Directors, the income generated will be retained in the long term on a pro rata basis depending on the equity ratio and the financing situation. This safeguards Swissgrid's long-term financial stability.

Financial statements Swiss GAAP FER

Income statement

In millions of CHF	Notes	2021	2020
Net turnover	4, 5	715.1	588.2
Other operating income	4, 6	17.1	14.5
Change in volume- and tariff-related timing differences	4, 15	279.7	107.9
Capitalised self-constructed assets		17.3	14.2
Total operating income		1,029.2	724.8
Procurement costs	4, 5	417.5	228.5
Gross profit		611.7	496.3
Cost of materials and third-party supplies	7	94.5	94.5
Personnel expenses	8	105.9	101.5
Other operating expenses	9	28.0	28.8
Earnings before interest, income taxes, depreciation and amortisation		383.3	271.5
Depreciation on property, plant and equipment	13	146.0	125.4
Amortisation on intangible assets	13	33.0	29.4
Earnings before interest and income taxes (EBIT)	4	204.3	116.7
Financial income	10	0.9	1.0
Financial expenses	11	53.5	26.0
Earnings before income taxes		151.7	91.7
Income taxes	12	45.5	16.0
Net income		106.2	75.7

Earnings per share

CHF	2021	2020
Net income	106,221,536	75,735,726
Weighted average number of shares outstanding	325,097,150	320,398,149
Non-diluted earnings per share	0.33	0.24
Dilution from the conversion of the convertible loans	-0.04	-0.03
Diluted earnings per share	0.29	0.21

The dilution arises from the potential conversion of the convertible loans to equity. Assuming that conversion had taken place on 1 January of the reporting year, the interest expense would have been reduced by CHF 12.4 million (previous year: CHF 15.7 million). Given that taxes are chargeable in Swissgrid's regulated business model, the conversion would have increased net income by CHF 12.4 million (previous year: CHF 15.7 million). At the same time, the average number of shares outstanding would also have increased by 90,263,869 units (previous year: 119,907,035 units). This leads to a potential dilution of CHF -0.04 per share (previous year: CHF -0.03 per share).

Net income 2021	–	–	106.20	106.20
Balance at 31.12.2021	334.5	431.2	492.00	1,257.7

The share capital consists of 334,495,151 (previous year: 320,398,149) fully paid-up registered shares with a par value of CHF 1 per share. As at 31 December 2021, Swissgrid has conditional share capital of a maximum of CHF 112,939,487, divided into 112,939,487 registered shares with a par value of CHF 1 per share (previous year: CHF 127,036,489, divided into 127,036,489 registered shares with a par value of CHF 1 per share).

Capital increase of conditional capital The conditional capital was created to exercise conversion rights granted to creditors of convertible loans. In the period between 13 September 2021 and 6 October 2021, a capital increase of conditional share capital with a nominal value of CHF 14.1 million was carried out following the final remuneration paid in 2021 for the grid takeovers undertaken since 2013. The issue price was CHF 35.3 million. The amount of the capital increase corresponds to the value after recognition of the equity transaction costs (CHF 0.04 million) as a reduction of the capital reserves.

Financial statements Swiss GAAP FER

Notes

1. Accounting principles

General

The 2021 financial statements of Swissgrid Ltd (hereinafter: Swissgrid) have been prepared in accordance with Swiss GAAP FER. The financial statements provide a true and fair view of the company's assets, financial position and results of operations.

Conversion of foreign currency items

The accounting records are maintained in the local currency (Swiss francs, CHF). All monetary assets and liabilities recognised in foreign currencies are converted at the exchange rate as of the balance sheet date. Transactions in foreign currencies are converted at the exchange rate on the day the transaction took place. Foreign exchange gains and losses resulting from transactions in foreign currencies are recognised in the income statement and are presented in the same item as the underlying transaction.

Cash flow statement

Cash and cash equivalents form the basis for the presentation of the cash flow statement. The cash flow from operating activities is calculated using the indirect method.

Revenue recognition

Revenue is recognised in the income statement upon performance of Swissgrid's obligations. For activities regulated under the Federal Electricity Supply Act (StromVG), the measurement of performance is based mainly on energy volumes directly metered on the transmission grid or reported from downstream grid levels. For certain revenue and procurement items, initial billing values are available six weeks after delivery at the earliest, thereby rendering accruals based on historical and statistical data, as well as on estimates necessary for the revenue recognition of these items.

Activities according to StromVG

Volume- and tariff-related timing differences (surpluses and deficits)

According to Art. 14 of the Electricity Supply Act (StromVG), grid utilisation costs must be allocated to users on a user-pays basis. The tariffs for a financial year are determined based on planned costs. Due to price and volume deviations, actual expenses and income vary from the tariff calculation on both the revenue and procurement side. This results in surpluses or deficits, i.e. the tariff revenues from a financial year are higher or lower than the actual expenses incurred during the same period. These volume- and tariff-related timing differences are transferred to the balance sheet and taken into account in cost and revenue calculations for future tariff periods. The expected reduction in volume- and tariff-related timing differences within twelve months of the balance sheet date is recognised as short-term surpluses or deficits in the balance sheet.

EBIT regulated under StromVG

Earnings before interest and taxes (EBIT) from activities related to the Federal Electricity Supply Act (StromVG) are defined in Article 13 of the Electricity Supply Ordinance (StromVV) and are equivalent to the interest applied to the assets required to operate the transmission system with the weighted average cost of capital rate (WACC) for the current year under review (= $WACC_{t+0}$) and the interest applied to the volume and tariff-related timing differences with the weighted average cost of capital rate of $WACC_{t+2}$ plus income taxes.

Invested operating assets consist of net current assets calculated on a monthly basis as well as the property, plant and equipment and intangible assets as at the end of the financial year. The weighted average cost of capital rate (WACC) is based on the current international practice of the WACC capital cost concept with reference to the Capital Asset Pricing Model (CAPM). Besides considering the findings of financial market theory, the regulatory framework conditions in Switzerland and the current situation in the money and capital market are also taken into account. The official weighted average cost of capital rates for 2021 ($WACC_{t+0}$) and 2023 ($WACC_{t+2}$) based on this method of calculation are unchanged from the 3.83% used in the previous year.

EICom has the right to verify ex post the chargeability of Swissgrid's operating and capital costs for tariff-setting purposes. In case of an ex post cost adjustment, an appeal can be lodged with the Federal Administrative Court with the possibility of appeal to the Federal Supreme Court. A cost adjustment impacting Swissgrid's operating result is applied whenever no appeal is lodged, or whenever an appeal's prospects for success are judged to be less than 50% on the basis of a reappraisal, or whenever a legally binding ruling is issued.

Property, plant and equipment

Property, plant and equipment are recognised at the cost of acquisition or production less accumulated amortisation and any impairment losses. Significant spare parts which are likely to be used for a longer period and whose use only takes place in connection with a non-current asset item are recognised in non-current assets and depreciated over the remaining useful life of the relevant asset.

Depreciation/amortisation is calculated using the straight-line method on the basis of the estimated useful technical and economic service life. The service life is determined as follows:

- Lines: 15 to 60 years
- Substations: 10 to 35 years
- Buildings and expansions: 5 to 50 years
- Other property, plant and equipment: 3 to 8 years
- Construction in progress and properties: only applicable in the case of an impairment loss

Intangible assets

Intangible assets are recognised at the cost of acquisition or production less accumulated amortisation and any impairment losses. Depreciation/amortisation is calculated using the straight-line method on the basis of the estimated useful technical and economic service life.

The service life is determined as follows:

- Rights of use: contract term
- Software and technical regulations: 3 to 5 years
- Intangible assets under development: only applicable in the case of an impairment loss

Impairment losses

The value of property, plant and equipment and intangible assets is reviewed annually. If there is an indication of an impairment loss, the book value is reduced to the realisable value and an impairment loss is charged to the results of the period.

Construction in progress/intangible assets under development

Construction in progress and intangible assets under development are non-current assets that are not yet completed or not yet operational. All items of property, plant and equipment and intangible assets, including self-constructed assets, are classified as non-current assets. As of each balance sheet date, a review is performed to determine whether any construction in progress or intangible assets under development have to be impaired. These are recognised as impairment losses in the year of completion. Ordinary depreciation or amortisation of these assets begins once they are completed or are ready for operation.

Financial assets

Financial assets are measured at acquisition costs less any impairment losses. These include shareholdings with a capital share of over 20%, but which do not have a significant impact on the financial statements, as well as shareholdings with a capital share of less than 20%. Employer contribution reserves without conditional renounced use are also recognised in financial assets.

Inventory

Inventory includes waste material for maintaining the grid systems. Inventory is measured at the lower of acquisition cost or market price.

Accounts receivable

Accounts receivable are reported at their nominal value less any impairment losses required for business reasons.

Cash and cash equivalents

Cash and cash equivalents include cash in hand, cash at banks and deposits at banks maturing in 90 days or less. They are recognised at their nominal value.

Bonds

Bonds issued on the capital market are recognised at their nominal value. Deviations from the nominal value in the case of below- or above-par issues are recognised as accruals and deferrals and are reversed on a straight-line basis over the term of the bond.

Liabilities

Liabilities are recognised at their nominal value.

Provisions

Provisions are recognised if there is an obligation based on an event that took place prior to the balance sheet date, the amount and/or due date of which is uncertain but capable of being estimated.

Contingent liabilities

Contingent liabilities are measured as of the balance sheet date. A provision is reported if a cash outflow without a usable countervalue is probable and assessable. Otherwise, contingent liabilities are

disclosed in the notes to the financial statements.

Interest on borrowed capital

Interest on borrowed capital is recognised as an expense in the period in which it arises.

Employee pension plan

Swissgrid is a member of an industry-wide retirement benefit plan (PKE Pensionskasse Energie). This is a legally independent pension fund. All permanent employees of the company are included in this pension fund from 1 January of the year in which they turn 18. They are insured for disability and death. From 1 January of the year in which they turn 25, employees are also covered by retirement insurance.

Economic benefits arising from a pension fund surplus (e.g. in the form of a positive impact on future cash flows) are not capitalised, since the prerequisites for this are not met and the company does not intend to use such benefits to reduce employer contributions. Any benefits arising from freely available employer contribution reserves are recognised as an asset.

An economic obligation (e.g. in the form of negative effects on future cash flows due to a pension fund deficit) is recognised if the prerequisites for the creation of a provision are met. Accrued contributions for the period, the difference between the annually calculated economic benefit from pension fund surpluses and obligations, as well as the change in the employer contribution reserves are recognised in the income statement as personnel expenses.

Transactions with related parties

Related parties are organisations and persons that can have a significant influence, either directly or indirectly, on Swissgrid's financial or operational decisions. Shareholders holding at least 20% of the voting rights in Swissgrid, either alone or together with others, are considered to be related parties. As regards shareholders, other criteria in addition to the proportion of voting rights held are also taken into account (including representation in committees and the possibility of exerting influence due to the shareholder structure). Subsidiaries of related shareholders as well as partner plant companies whose shares are 100% owned by related shareholders or which are controlled by a related shareholder, are also considered to be related parties. Related parties also include companies over which Swissgrid exercises a significant influence. Members of the Board of Directors and the Executive Board are also considered to be related parties. Provided they exist and are significant, relations with related parties are disclosed in the notes to the financial statements. All transactions are conducted at arm's length.

Segment information

Segmentation is based on tariff groups as defined in the Electricity Supply Act and is aligned with Swissgrid's internal reporting structure.

Income taxes

Current income taxes are calculated based on the taxable results on an accrual basis. The annual accrual of deferred taxes is based on a balance sheet perspective (balance sheet method) and considers all future income tax effects (comprehensive method).

Derivative financial instruments

Swissgrid may use derivative financial instruments to hedge against currency and market price risks. If the conditions are met, Swissgrid will apply hedge accounting to hedge expected future cash flows. The instruments used for this purpose will be disclosed in the notes to the financial statements until the

underlying transaction is realised.

2. Estimation uncertainty

Financial-statement reporting requires estimates and assumptions to be made that may have a significant impact on Swissgrid's financial statements. With respect to assets and liabilities recognised in the balance sheet, accruals and deferrals (prepaid expenses and accrued income/ accrued expenses and deferred income) and volume- and tariff-related timing differences in particular are based on various assumptions and estimates that may necessitate significant adjustments. This is due to specific volumes not being available for certain revenue and procurement items when the financial statements are prepared, as well as regulatory uncertainties. The volume- and tariff-related timing differences are also influenced by estimates in the allocation of operating expenses to the segments.

For more information on this, the reader is referred to the comments in the sections on «Revenue recognition» and «Activities according to StromVG» in Note 1, as well as the comments in the following section.

3. Legal proceedings

Swissgrid's legal mandate and business activities expose the company to costs that can be passed on to the lower grid levels and end consumers in the form of tariff revenues if ECom deems the costs to be chargeable. ECom has the right to verify ex post the chargeability of Swissgrid's costs for tariff-setting purposes.

At present, ECom has not initiated any proceedings to examine Swissgrid's chargeable costs. Swissgrid's Board of Directors and Executive Board believe that all costs were incurred within the framework of Swissgrid's legal mandate and should therefore qualify as chargeable. Based on this assessment, Swissgrid has treated all operating and capital costs as chargeable and consequently recognised them in full in the volume- and tariff-related timing differences. If, contrary to Swissgrid's assessment, the costs claimed are ruled to be non-chargeable, this would be reflected in future financial statements.

Third-party proceedings

The financial impact of third-party proceedings in which Swissgrid is involved are included in Swissgrid's financial statements if the Swiss GAAP FER criteria for recognition have been met. However, they have no direct impact on Swissgrid's results as they are included in the volume- and tariff-related timing differences.

4. Segment reporting

For segment reporting, the costs of capitalised self-constructed assets are deducted from operating expenses and are therefore not included in total operating income.

Eliminations: active power losses are a separate internal balance group. As a result, internal transactions occur between the general ancillary services/balance energy and active power losses segments.

Congestion management is included in the other activities.

Segment report 2021

Volume- and tariff-related timing differences: negative figures represent surpluses, and positive figures deficits.

Earnings before interest and taxes (EBIT) per segment within the StromVG-regulated activities correspond to the capital costs on the invested operating assets plus taxes (cf. Note 1). The individual expense and income positions assigned to the four segments within the StromVG-regulated activities are listed in Note 5.

Grid utilisation

The grid utilisation segment is predominantly financed by various charges for use of the grid. This segment is also assigned the income from auctioning bottleneck capacities at the national borders to reduce the chargeable grid costs, provided that this purpose is approved by ElCom. This segment also includes part of the compensation for international transit flows (ITC); the other part is recognised in the active power losses segment.

Net turnover in this segment amounts to CHF 479.4 million in the 2021 financial year, CHF 124.7 million above the previous year. Higher tariff revenues of CHF 65.3 million and higher income from auctions for the reduction of chargeable grid costs of CHF 61.1 million are the reasons for this increase in relation to the previous year. The procurement costs in the 2021 financial year amount to CHF 54.0 million, CHF 11.2 million above the previous year's value of CHF 42.8 million. This is due to a CHF 24.6 million increase in additional remuneration to former transmission system owners and a CHF 13.4 million decrease in national redispatch costs.

Despite the higher net turnover, the costs exceed the income generated in the 2021 financial year, resulting in a deficit of CHF 122.6 million.

General ancillary services/balance energy

In 2021, net income in this segment rose from CHF 125.4 million to CHF 165.0 million, primarily due to the increase in revenue from balance group balance energy.

The largest expense item for this segment is control power provision, i.e. the reservation of power plant capacity in the interests of balancing energy consumption and energy feed-in as well as the proportional voltage stability costs payable by this segment. The procurement costs of CHF 292.0 million in this segment are CHF 159.3 million above the 2020 figure (CHF 132.7 million). This increase is primarily due to higher costs of CHF 161.4 million for control power provision and AS energy.

In 2021, costs exceeded net turnover, resulting in a deficit of CHF 150.6 million.

Active power losses (individual ancillary services)

This segment reports expenses and income for active power losses in the transmission grid. In addition to tariff revenues, part of the income from ITC is recognised in this segment.

The procurement of energy to offset active power losses takes place on the spot market and via tenders. Net turnover of CHF 58.0 million in this segment is CHF 36.1 million lower than in the previous year (CHF 94.1 million), primarily due to the CHF 29.0 million decrease in tariff revenue.

In the financial year, this segment recorded procurement costs for active power loss of CHF 62.6 million, an increase of CHF 23.3 million from the previous year.

In 2021, costs exceeded revenue, resulting in a deficit of CHF 8.5 million.

Reactive energy (individual ancillary services)

The supply of reactive energy to maintain the required operating voltage is ensured by means of contractual agreements with several power plants.

Net turnover in this segment increased by CHF 1.7 million year on year to CHF 19.4 million due to the higher tariff revenue. By contrast, the procurement costs amount to CHF 15.6 million, CHF 1.8 million below the previous year's level of CHF 17.4 million. This decrease is due to the lower pro rata voltage stability costs payable by this segment.

In the 2021 financial year, higher revenue as well as reduced costs led to a surplus of CHF 2.0 million.

5. Net turnover and procurement costs according to StromVG

In millions of CHF	Segment	2021	2020
Tariff income for grid utilisation	A	376.7	311.4
Net income from ITC	A/C	6.3	15.1
Income from auctions for the reduction of chargeable grid costs	A	100.8	39.7
Tariff income for general ancillary services (AS) and income from unintentional deviation	B	99.6	88.9
Income from balance group/balance energy	B	65.4	36.5
Tariff income for active power losses	C	53.6	82.6
Tariff income for reactive energy	D	19.4	17.7
Eliminations		-6.7	-3.7
Net turnover		715.1	588.2
Expenses for national redispatch	A	4.1	17.5
Remuneration to former transmission system owners	A	49.9	25.3
Expenses for AS control power provision and unintentional deviation	B	188.0	50.1
Expenses for automatic start-up/island operation capability	B	1.1	1.1
Expenses for grid enhancement	B	3.6	9.0
Expenses for AS energy	B	49.6	26.1
Expenses for compensation of active power losses	C	62.6	39.3
Expenses for reactive energy/voltage maintenance	B/D	65.3	63.8

In millions of CHF	Segment	2021	2020
Eliminations		-6.7	-3.7
Procurement costs		417.5	228.5

Letters used for segment allocation:

A = Grid utilisation

B = General ancillary services/balance energy

C = Active power losses (individual ancillary services)

D = Reactive energy (individual ancillary services)

Segment reporting is provided in Note 4.

Income from ITC consists of the following:

- Compensation for grid utilisation (A) CHF 1.9 million (previous year: CHF 3.6 million)
- Compensation for active power losses (C) CHF 4.4 million (previous year: CHF 11.5 million)

The ITC compensation for grid utilisation and active power losses corresponds to net income. Supervision charges paid to ECom and to the Swiss Federal Office of Energy (SFOE) amounting to CHF 4.6 million (previous year: CHF 4.8 million) are deducted from the gross income of CHF 3.3 million for grid utilisation (previous year: CHF 4.8 million) and CHF 7.6 million for active power losses (previous year: CHF 15.1 million).

Expenses for reactive energy/voltage maintenance is comprised as follows:

- General AS (B): CHF 49.7 million (previous year: CHF 46.4 million)
- Reactive energy (D): CHF 15.6 million (previous year: CHF 17.4 million).

Eliminations: active power losses are a separate internal balance group. As a result, internal transactions occur between the general ancillary services/balance energy and active power losses segments.

6. Other operating income

In millions of CHF	2021	2020
Congestion management clearing	15.6	12.4
Other	1.5	2.1
	17.1	14.5

7. Materials and third-party supplies

In millions of CHF	2021	2020
Grid maintenance	19.1	19.1
Grid system control	0.4	0.4

In millions of CHF	2021	2020
Other services in the grid area	23.7	31.5
Expenses for projects, advisory and non-cash benefits	38.7	32.4
Hardware/software maintenance	12.6	11.1
	94.5	94.5

Other grid-related services include remuneration for easements, including easement management services performed by third parties and operating expenses for mixed-use plants. The number of easements for which Swissgrid pays remuneration to the property owners and therefore also the other services in the grid area item decreased compared to the previous year. Due to the implementation of Strategy 2022 measures, the expenses for projects, advisory services and non-cash benefits were higher year on year.

8. Personnel expenses

Personnel

In millions of CHF	2021	2020
Salaries, bonuses, allowances	84.9	81.5
Employee insurance	17.2	16.3
Other personnel expenses	3.8	3.7
	105.9	101.5
Headcount at 31.12.		
Permanent employment:		
Number of employees	625.0	591.0
expressed as full-time equivalents	587.7	558.0
Fixed-term employment:		
Number of employees	12.0	7.0
expressed as full-time equivalents	10.2	5.5

Other personnel expenses include, in particular, the costs of training and further education, recruitment, lump-sum expenses as well as allowances for external catering for employees.

Executive Board remuneration

In millions of CHF	2021	2020
Fixed remuneration (incl. lump-sum expenses)	1.78	1.78

In millions of CHF	2021	2020
Variable remuneration	0.62	1.06
Non-cash benefits ¹	0.02	0.03
Pension benefits ²	0.50	0.53
Total remuneration to the Executive Board	2.92	3.40
Of which to the highest-earning member of the Executive Board		
Fixed remuneration (incl. lump-sum expenses)	0.49	0.49
Variable remuneration	0.22	0.28
Pension benefits ²	0.13	0.14
Total remuneration to the highest-earning member of the Executive Board	0.84	0.91

¹ Non-cash benefits include the private use of business vehicles.

² Pension benefits include employer contributions to social security and the employee pension plan.

Further information on the members of the Executive Board can be found in the Corporate Governance Report.

9. Other operating expenses

In millions of CHF	2021	2020
Rental and occupancy costs	9.4	8.7
Ground rents	4.8	6.5
Rental costs for communication equipment/telecommunication expense	3.2	3.1
Board of Directors' fees and expenses, incl. social costs	0.8	0.8
Actual expenses for travel and subsistence for employees and third parties	0.8	0.9
Fees, dues and licences	4.1	4.4
Insurance	1.8	1.4
Other administrative costs	3.1	3.0
	28.0	28.8

Board of Directors' fees and expenses represent fixed gross remuneration. The remuneration paid to the Chairman of the Board of Directors amounted to CHF 250,000, including lump-sum expenses (previous year: CHF 250,000). The remaining members of the Board of Directors received remuneration of between CHF 57,500 and CHF 70,000 pro rata temporis for 2021, including lump-sum expenses (previous year: CHF 57,500 to CHF 70,000).

Further information on the members of the Board of Directors can be found in the Corporate

10. Financial income

In millions of CHF	2021	2020
Other financial income	0.9	1.0
	0.9	1.0

Other financial income includes a dividend of CHF 0.5 million (previous year: CHF 0.7 million) received from Holding des Gestionnaires de Réseau de Transport d'Électricité SAS (HGRT).

11. Financial expenses

In millions of CHF	2021	2020
Bond interest	10.0	9.7
Loans and convertible loans interest	42.7	15.7
Commitment fees	0.1	0.2
Other financial expenses	0.7	0.4
	53.5	26.0

The convertible loans increased due to the final remuneration paid in 2021 for the grid takeovers undertaken since 2013. The increase was retroactive to the respective date of the grid takeover. The resulting interest of CHF 30.3 million to be paid for previous years is included in the item «Loans and convertible loans interest».

12. Income taxes

In millions of CHF	2021	2020
Current income taxes	25.8	17.3
Change in deferred taxes	19.7	-1.3
	45.5	16.0

The higher current income taxes compared to the previous year are a consequence of the higher net income in 2021 in relation to 2020. An average rate of 17.4% (previous year: 17.9%) was used to calculate the current income taxes and, in 2021, deferred taxes were calculated based on an expected rate of 17.2% (previous year: 17.65%).

The effective average tax rate based on earnings before tax amounts to 30.0% (previous year: 17.4%). Adjusted to take into account the increase in deferred taxes due to the final remuneration of CHF 20.5

million for the grid takeovers, the average tax rate is 16.5%.

13. Non-current assets

Summary of property, plant and equipment – 2021

In millions of CHF	Advances and construction in progress	Substations	Lines	Properties and buildings	Other property, plant and equipment	Total

Gross investments in property, plant and equipment amounted to CHF 190.3 million (previous year: CHF 165.5 million). Thereof, CHF 3.1 million (previous year: CHF 32.3 million) was financed by proceeds from the auctioning of bottleneck capacities for cross-border supplies. Project costs of CHF 1.1 million were reclassified from intangible assets under development to construction in progress in the year under review (previous year: CHF 2.7 million from construction in progress to intangible assets under development).

Related parties received CHF 74.1 million in final remuneration in 2021 for the grid takeovers undertaken since 2013. Property, plant and equipment of CHF 14.2 million (previous year: CHF 9.6 million) were purchased from related parties in 2021.

Due to changes in ownership, Swissgrid's share in TSCNET Services GmbH and Equigy B.V. has decreased to 6.7% and 20.0% respectively. Swissgrid is not legally obliged to prepare consolidated financial statements. Either the control principle necessary to prepare a consolidated financial statement (Art.963 of the Swiss Code of Obligations (CO)) is not met, or the subsidiaries do not have a material influence on Swissgrid's financial statements. In particular, Pronovo AG is regulated by the Swiss Federal Office of Energy (SFOE) and is explicitly excluded from any consolidation with Swissgrid based on Art.64(5) of the Energy Act (EnG).

Otherwise, the information is unchanged from the previous year.

15. Volume- and tariff-related timing differences

In millions of CHF	Grid utilisation	General ancillary services/balance energy	Active power losses (individual ancillary services)	Reactive energy (individual ancillary services)	Total volume- and tariff-related timing differences	Thereof surpluses	Thereof deficits
Balance at 31.12.2019	15.5	-149.8	58.7	22.8	-52.8	-149.8	97.0
Change in 2020	128.6	29.0	-51.4	1.7	107.9	-	-
Balance at 31.12.2020	144.1	-120.8	7.3	24.5	55.1	-120.8	175.9
Change in 2021	122.6	150.6	8.5	-2.0	279.7	-	-
Final remuneration for the grid takeovers	-8.5	-	-	-	-8.5	-	-
Balance at 31.12.2021	258.2	29.8	15.8	22.5	326.3	-	326.3
Current portion	-	-	-	4.2	4.2	-	4.2

Negative figures represent surpluses, and positive figures deficits. Further information on volume- and tariff-related timing differences (function, estimation uncertainties and current legal proceedings) can be found in Notes 1, 2 and 3.

More detailed comments on the reclassifications item are contained in Note 4 on the reactive energy

segment (individual ancillary services).

16. Balance sheet items held on a fiduciary basis

On the basis of a statutory mandate, Swissgrid coordinates the auctioning of bottleneck capacities for cross-border supplies and maintains accounting records and bank accounts on a fiduciary basis for this purpose.

Assets held on a fiduciary basis

In millions of CHF	31.12.2021	31.12.2020
Trade accounts receivable	110.6	11.5
Other receivables	5.8	–
Prepaid expenses and accrued income	3.0	3.3
Cash and cash equivalents	18.4	9.1
	137.8	23.9

Liabilities held on a fiduciary basis

In millions of CHF	31.12.2021	31.12.2020
Trade accounts payable	93.6	16.6
Other liabilities	–	0.4
Accrued expenses and deferred income	44.2	6.9
	137.8	23.9

The revenues and the manner in which they are used are as follows:

Auctions

In millions of CHF	2021	2020
Share of revenue Switzerland	154.7	91.4
Congestion management clearing	–17.3	–13.5
Net proceeds	137.4	77.9
Used for reduction of the chargeable grid costs	–97.1	–39.1
Used for grid investments	–	–32.0
Undistributed income from auctions	40.3	6.8

Pursuant to the EICoM ruling issued on 6 April 2020, income from auctions in 2021 amounting to

CHF 97.1 million (previous year: CHF 71.1 million) was paid to Swissgrid. At CHF 137.8 million, the balance sheet item is CHF 113.9 million above the previous year's value of CHF 23.9 million. This is primarily due to the CHF 33.5 million increase in unused income from auctions as well as the higher level of outstanding trade accounts receivable and trade accounts payable as at 31 December 2021.

As of the balance sheet date, derivative financial instruments (futures) in the nominal amount of EUR 43.0 million exist to partially hedge against the EUR/CHF currency risk from expected future income in euros. The positive replacement values as at 31 December 2021 amount to CHF 2.2 million (previous year: negative replacement values of CHF 1.0 million).

17. Trade receivables

In millions of CHF	31.12.2021	31.12.2020
Trade receivables	180.8	125.5
Specific valuation allowances	–	–
	180.8	125.5

18. Other receivables

In millions of CHF	31.12.2021	31.12.2020
Security deposits on blocked bank accounts	1.1	1.1
Other	18.6	13.1
	19.7	14.2

In particular, other receivables include the receivable for the 2021 enforcement costs for handling congestion management amounting to CHF 15.6 million (previous year: CHF 12.4 million) and VAT credit of CHF 2.0 million (previous year: VAT liability of CHF 0.4 million).

19. Prepaid expenses and accrued income

In millions of CHF	31.12.2021	31.12.2020
Accrued revenue for supplies made	57.7	41.4
Other	23.4	25.5
	81.1	66.9

In particular, other prepaid expenses and accrued income include the discount on bond issues and financing and issue costs, which are amortised over the term of the financing instrument.

20. Financial liabilities

In millions of CHF	31.12.2021	31.12.2020
Bonds	1,540.0	1,180.0
Convertible loans	326.70	415.40
Loans	0.10	0.10
Total financial liabilities	1,866.8	1,595.5
Current portion	254.6	172.4

Bonds

100 million	0,200%	2021 - 2040	29.06.2040
125 million	0,050%	2019 - 2050	30.06.2050

Convertible loans and loans

Convertible loans have a term of nine years and one-fifth of the loans become payable annually from year five. Partial repayments of convertible loans amounting to CHF 170.9 million were made in the 2021 financial year. Moreover, loans are also assigned a conversion right by Swissgrid in the event of occurrence of contractually defined events and an associated conversion obligation by the creditors. Creditors are compensated by a premium on the interest rate for the conversion right assigned to Swissgrid. Convertible loans are recognised in full in liabilities.

The interest conditions and maturities of convertible loans and loans are as follows:

Position	Interest rate (bandwidth)	Year 1	Year 2–5	More than 5 years
Convertible loans	3.36 - 3.93%	254.6	68.3	3.8
Loans	0.00%	–	–	0.1

Convertible loans and loans are assessed at their nominal value.

Lines of credit

The committed lines of credit total CHF 200 million and remain unclaimed as at 31 December 2021.

21. Provisions

In millions of CHF	Dismantling	Employee incentive plan	Procedural costs	Deferred taxes	Total provisions
Balance at 31 December 2019	6.1	0.3	3.8	19.9	30.1
Provisions raised	–	–	1.5	–	1.5
Provisions used	–	0.3	1.5	1.3	3.1
Reversals	–	–	0.9	–	0.9
Balance at 31 December 2020	6.1	–	2.9	18.6	27.6
Provisions raised	–	–	0.2	20.5	20.7
Provisions used	–	–	2.1	0.8	2.9
Reversals	–	–	0.5	–	0.5
Balance at 31 December 2021	6.1	–	0.5	38.3	44.9
Current portion	–	–	0.2	–	0.2

Procedural costs

With the grid takeovers on 3 January 2013 and 5 January 2015 and the associated spin-offs of the procedural companies from the grid companies, contractual regulations mean that Swissgrid is responsible for the costs of proceedings attributable to the procedural companies. The provision as at 31 December 2021 includes the remaining expected expenses for party, court and legal costs due to the final remuneration for the grid takeovers paid in 2021.

The provision amount also includes the estimated compensation payable to parties and the court costs imposed on Swissgrid due to the administrative procedures in conducting proceedings.

Deferred income taxes

Due to the final remuneration for the grid takeovers, deferred income taxes of CHF 20.5 million were recognised in 2021.

22. Other liabilities

In millions of CHF	31.12.2021	31.12.2020
Value-added tax	–	0.4
Security deposits on blocked bank accounts	0.7	0.8
Other	1.7	1.7
	2.4	2.9

In particular, the «Other» item contains outstanding obligations towards PKE Vorsorgestiftung Energie of CHF 1.4 million (previous year: CHF 1.3 million) as of the cut-off date.

23. Accrued expenses and deferred income

In millions of CHF	31.12.2021	31.12.2020
Accrued expenses for supplies made	101.5	49.8
Personnel expenses and employee insurance scheme	10.0	9.0
Accrued interest and premium from issued bonds	15.4	9.0
Taxes	16.7	9.2
	143.6	77.0

24. Contingent receivables

Billing method for the ancillary services (AS) surcharge

EICom defined the billing method for the AS surcharge in its 4/2018 directive. Under this method, Swissgrid and the distribution system operators wait until the subsequent year to finally settle payments of AS tariffs for the previous financial year.

The settlement will result in receivables owed to Swissgrid by the distribution system operators. However, since the amount of these receivables could not be reliably determined when the financial statements were prepared, they were recognised as contingent receivables.

25. Other off-balance sheet commitments

Joint Allocation Office (O)

As a shareholder of the Joint Allocation Office (JAO), Swissgrid is contractually obliged to assume its share of the annual costs.

TSCNET Services GmbH

As a shareholder of TSCNET Services GmbH, Swissgrid is contractually obliged to assume its share of the annual costs.

Equigy B.V.

As a shareholder of Equigy B.V., Swissgrid is contractually obliged to assume its share of the annual costs.

Long-term rental contracts

Long-term rental contracts with fixed terms exist with several parties. These result in the following obligations:

In millions of CHF	Year 1	Year 2–10	More than 10 years	Total
31.12.2021	5.8	36.5	64.3	106.6

In millions of CHF	Year 1	Year 2–10	More than 10 years	Total
31.12.2020	6.0	38.3	68.3	112.6

The long-term rental obligations primarily include the rental commitments for Swissgrid's head office in Aarau.

Off-balance-sheet lease commitments

Swissgrid has the following off-balance-sheet lease commitments for vehicles and office equipment:

In millions of CHF	Year 1	Year 2–5	Total
31.12.2021	0.8	1.6	2.4
31.12.2020	0.8	1.2	2.0

26. Derivative financial instruments

Swissgrid made use of derivative financial instruments to partially hedge against market price risk from future procurement costs for active power losses. The nominal amount of these instruments is EUR 36.1 million (previous year: EUR 18.3 million), with positive replacement values of EUR 13.4 million as at 31 December 2021 (previous year: negative replacement values of EUR 1.5 million).

27. Employee pension plan

Economic benefit/economic obligation and pension expenses

In millions of CHF	Shortfall/surplus funding	Economic share of the organisation		Change compared with previous year/ affecting income in FY	Accrued amounts	Pension benefit expenses within personnel expenses	
		31.12.2021	31.12.2020			2021	2020
Pension fund with surplus funding (PKE)	1.0	–	–	–	10.1	10.1	9.6
Total	1.0	–	–	–	10.1	10.1	9.6

Swissgrid is affiliated to a collective plan by the pension fund PKE Vorsorgestiftung Energie. Therefore, an economic benefit or economic obligation cannot be determined on the basis of the individual affiliation contract. The coverage ratio of the collective plan is 125.2% as at 31 December 2021 (previous year: 112.5%).

28. Transactions with related parties

29. Events after the balance sheet date

There are no events after the balance sheet date that would require disclosure or recognition in the 2021 financial statements.

On 26 April 2022, the Board of Directors of Swissgrid Ltd approved the 2021 financial statements for submission to the General Assembly and for publication.

Financial statements Swiss GAAP FER

Independent Auditor's Report

Independent Auditor's Report

To the General Meeting of Swissgrid Ltd, Aarau

Opinion

We have audited the financial statements of Swissgrid Ltd, which comprise the balance sheet as at 31 December 2021, the statement of income, statement of changes in equity and statement of cash flows for the year then ended, and notes to the financial statements, including a summary of significant accounting policies.

In our opinion the financial statements (pages 25 to 56) give a true and fair view of the financial position of the Company as at 31 December 2021, and its results of operations and its cash flows for the year then ended in accordance with Swiss GAAP FER.

Basis for Opinion

We conducted our audit in accordance with Swiss Auditing Standards. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the Company in accordance with the requirements of the Swiss audit profession and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Report on Key Audit Matters based on the circular 1/2015 of the Federal Audit Oversight Authority

Accuracy of the calculation of the regulated EBIT and volume- and tariff-related timing differences

Completeness and accuracy of the net turnover and procurement costs

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Accuracy of the calculation of the regulated EBIT and volume- and tariff-related timing differences

Key Audit Matter

For the 2021 financial year Swissgrid reports an EBIT (earnings before interest and taxes) of CHF 204.3 million. The change in volume- and tariff-related timing differences amounts to CHF +279.7 million.

The EBIT presented in Swissgrid's financial statements is legally defined as the multiplication of the invested operating assets (regulatory asset base, "RAB") and volume- and tariff-related timing differences by the applicable regulatory interest rates plus taxes. The RAB consists of the transmission grid assets (incl. construction in progress), the intangible assets and the net current assets determined on a monthly basis.

Cost and volume variances between the actual costs and income for a year and the costs and income pre-determined in advance at tariff level for the same year lead to so-called volume- and tariff-related timing differences. These are deferred separately as surpluses or deficits in the balance sheet and must be amortized over the coming years. The yearly change is recorded separately in the income statement under "Change in volume- and tariff-related timing differences".

There is a risk that the EBIT and the volume- and tariff-related timing differences are not calculated according to the applicable legal and regulatory provisions and that, consequently, the EBIT and the volume- and tariff-related timing differences are not presented correctly in the financial statements.

For further information on the calculation of the regulated EBIT and volume- and tariff-related timing differences refer to the notes of the financial statements Swiss GAAP FER under note "1. Accounting principles" (paragraph Activities according to StromVG), under note "3. Legal proceedings" and under note "4. Segment reporting" (paragraph Change in volume- and tariff-related timing differences per segment) as well as under note "15. Volume- and tariff-related timing differences".

Our response

We have performed mainly the following audit procedures:

- Identification of the key controls and verification of their effectiveness using sampling;
- Reconciliation of the method used for calculating the regulated EBIT and volume- and tariff-related timing differences with the legal, administrative and regulatory requirements;
- Recalculation of the interest on the various components of the RAB and volume- and tariff-related timing differences using the interest rates according to the legal base (StromVG/StromVV) as well as to the decisions and directives of the Swiss Federal Electricity Commission (ElCom) and comparison with the recorded values;
- Evaluation of the completeness and transparency of the disclosures presented in the financial statements.

Completeness and accuracy of the net turnover and procurement costs

Key Audit Matter

For the 2021 financial year Swissgrid reports a net turnover of CHF 715.1 Mio. CHF and the procurement costs amount to CHF 417.5 Mio. CHF.

The calculation of the net turnover (performance) and procurement costs is based mainly on the energy data directly metered on the transmission system or reported from downstream grid levels. For the measurement of performance, regulated tariffs must mainly be taken into account; for the procurement costs the applicable market prices.

Swissgrid's regulated activities are characterized by a high volume of IT-based transactions.

For certain turnover and procurement costs positions, no volume base exists at the closing date yet, which requires to make estimates and assumptions.

Due to the transaction volume, the various IT interfaces and the estimates / assumptions, there is a risk that the performance and costs are not calculated completely and correctly.

For further information on the net turnover and the procurement costs refer to the notes of the financial statements Swiss GAAP FER under note "2. Estimation uncertainty" and under note "4. Segment reporting" (paragraph Segment report 2021) as well as under note "5. Net turnover and procurement costs according to the electricity supply act (StromVG)".

Our response

We have analyzed the process relative to the calculation of the net turnover and procurement costs and we have determined whether the energy data have been recorded completely and correctly. In this respect, we have among others identified the key controls and we have then verified their effectiveness using sampling. We have considered the high degree of integration of the provision and recording of services by the various IT systems by testing the effectiveness of the general IT controls and application controls of the relevant IT systems for accounting purposes with the assistance of our IT specialists.

In order to assess the completeness and accuracy, we have also critically examined the main assumptions and evaluated the accuracy of the forecasts regarding the presented accruals, in particular by comparing retrospectively the accrued amounts and the actual amounts.

Furthermore, we have assessed the appropriateness of the disclosures in the financial statements concerning the corresponding positions of the balance sheet and income statement.

Responsibility of the Board of Directors for the Financial Statements

The Board of Directors is responsible for the preparation of the financial statements that give a true and fair view in accordance with Swiss GAAP FER, and for such internal control as the Board of Directors determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Swiss Auditing Standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with Swiss Auditing Standards, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made.
- Conclude on the appropriateness of the Board of Directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with the Board of Directors or its relevant committee regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the Board of Directors or its relevant committee with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the Board of Directors or its relevant committee, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report, unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Non-cash transactions

Of the final remuneration of CHF 117.4 million paid in 2021 for the grid takeovers undertaken since 2013, 30% came from Swissgrid shares and 70% from loans.

Statutory financial statements

Notes

1. Accounting principles

General

The financial statements for Swissgrid Ltd, Aarau, have been prepared in accordance with the Swiss Law on Accounting and Financial Reporting (Title 32 of the Swiss Code of Obligations). The valuation principles applied are described below.

Conversion of foreign currency items

The accounting records are maintained in the local currency (Swiss francs, CHF). All short-term monetary assets and liabilities recognised in foreign currencies are converted at the exchange rate as of the balance sheet date. Transactions in foreign currencies are converted at the exchange rate on the day the transaction took place. Foreign exchange gains and losses resulting from transactions in foreign currencies are recognised in the income statement and are presented in the same item as the underlying transaction.

Cash flow statement

Cash and cash equivalents form the basis for the presentation of the cash flow statement. The cash flow from operating activities is calculated using the indirect method.

Revenue recognition

Revenue is recognised in the income statement upon performance of Swissgrid's obligations. For activities regulated under the Federal Electricity Supply Act (StromVG), the measurement of performance is based mainly on energy volumes directly metered on the transmission grid or reported from downstream grid levels. For certain revenue and procurement items, initial billing values are available six weeks after delivery at the earliest, thereby rendering accruals based on historical and statistical data, as well as on estimates necessary for the revenue recognition of these items.

Activities according to StromVG

Volume- and tariff-related timing differences (surpluses and deficits)

According to Art. 14 of the Electricity Supply Act (StromVG), grid utilisation costs must be allocated to users on a user-pays basis. The tariffs for a financial year are determined based on planned costs. Due to price and volume deviations, actual expenses and income vary from the tariff calculation on both the revenue and procurement side. This results in surpluses or deficits, i.e. the tariff revenues from a financial year are higher or lower than the actual expenses incurred during the same period. These volume- and tariff-related timing differences are transferred to the balance sheet and taken into account in cost and revenue calculations for future tariff periods. The expected reduction in volume- and tariff-related timing differences within twelve months of the balance sheet date is recognised as short-term surpluses or deficits in the balance sheet.

EBIT regulated under StromVG

Earnings before interest and taxes (EBIT) from activities related to the Federal Electricity Supply Act (StromVG) are defined in Article 13 of the Electricity Supply Ordinance (StromVV) and are equivalent to the interest applied to the assets required to operate the transmission system with the weighted

average cost of capital rate (WACC) for the current year under review (= $WACC_{t+0}$) and the interest applied to the volume and tariff-related timing differences with the weighted average cost of capital rate of $WACC_{t+2}$ plus income taxes.

Invested operating assets consist of net current assets calculated on a monthly basis as well as the property, plant and equipment and intangible assets as at the end of the financial year. The weighted average cost of capital rate (WACC) is based on the current international practice of the WACC capital cost concept with reference to the Capital Asset Pricing Model (CAPM). Besides considering the findings of financial market theory, the regulatory framework conditions in Switzerland and the current situation in the money and capital market are also taken into account. The official weighted average cost of capital rates for 2021 ($WACC_{t+0}$) and 2023 ($WACC_{t+2}$) based on this method of calculation are unchanged from the 3.83% used in the previous year.

EICom has the right to verify ex post the chargeability of Swissgrid's operating and capital costs for tariff-setting purposes. In case of an ex post cost adjustment, an appeal can be lodged with the Federal Administrative Court with the possibility of appeal to the Federal Supreme Court. A cost adjustment impacting Swissgrid's operating result is applied whenever no appeal is lodged, or whenever an appeal's prospects for success are judged to be less than 50% on the basis of a reappraisal, or whenever a legally binding ruling is issued.

Property, plant and equipment

Property, plant and equipment are recognised at the cost of acquisition or production less accumulated amortisation and any impairment losses. Significant spare parts which are likely to be used for a longer period and whose use only takes place in connection with a non-current asset item are recognised in non-current assets and depreciated over the remaining useful life of the relevant asset. Depreciation/amortisation is calculated using the straight-line method on the basis of the estimated useful technical and economic service life.

The service life is determined as follows:

- Lines: 15 to 60 years
- Substations: 10 to 35 years
- Buildings and expansions: 5 to 50 years
- Other property, plant and equipment: 3 to 8 years
- Construction in progress and properties: only applicable in the case of an impairment loss

Intangible assets

Intangible assets are recognised at the cost of acquisition or production less accumulated amortisation and any impairment losses. Depreciation/amortisation is calculated using the straight-line method on the basis of the estimated useful technical and economic service life.

The service life is determined as follows:

- Rights of use: contract term
- Software and technical regulations: 3 to 5 years
- Intangible assets under development: only applicable in the case of an impairment loss

The merger losses (goodwill) resulting from the mergers on 3 January 2013 and 5 January 2015 are also recognised in this item. Goodwill is depreciated on a straight-line basis over 20 years and is

reviewed annually for impairments.

Impairment losses

The value of property, plant and equipment and intangible assets is reviewed annually. If there is an indication of an impairment loss, the book value is reduced to the realisable value and an impairment loss is charged to the results of the period.

Construction in progress/intangible assets under development

Construction in progress and intangible assets under development are non-current assets that are not yet completed or not yet operational. All items of property, plant and equipment and intangible assets, including self-constructed assets, are classified as non-current assets. As of each balance sheet date, a review is performed to determine whether any construction in progress or intangible assets under development have to be impaired. These are recognised as impairment losses in the year of completion. Ordinary depreciation or amortisation of these assets begins once they are completed or are ready for operation.

Financial assets

Financial assets are measured at acquisition costs less any impairment losses. Employer contribution reserves without conditional renounced use are also recognised in financial assets.

Shareholdings

Shareholdings are measured at acquisition costs less any impairment losses. These include shareholdings with a capital share of over 20%, but which do not have a significant impact on the financial statements, as well as shareholdings with a capital share of less than 20% that do have a significant impact.

Inventory

Inventory includes waste material for maintaining the grid systems. Inventory is measured at the lower of acquisition cost or market price.

Accounts receivable

Accounts receivable are reported at their nominal value less any impairment losses required for business reasons.

Cash and cash equivalents

Cash and cash equivalents include cash in hand, cash at banks and deposits at banks maturing in 90 days or less. They are recognised at their nominal value.

Bonds

Bonds issued on the capital market are recognised at their nominal value. Deviations from the nominal value in the case of below- or above-par issues are recognised as accruals and deferrals and are reversed on a straight-line basis over the term of the bond.

Liabilities

Liabilities are recognised at their nominal value.

Provisions

Provisions are recognised if there is an obligation based on an event that took place prior to the balance

sheet date, the amount and/or due date of which is uncertain but capable of being estimated.

Contingent liabilities

Contingent liabilities are measured as of the balance sheet date. A provision is reported if a cash outflow without a usable countervalue is probable and assessable. Otherwise, contingent liabilities are disclosed in the notes to the financial statements.

Interest on borrowed capital

Interest on borrowed capital is recognised as an expense in the period in which it arises.

Income taxes

Current income taxes are calculated based on the taxable results on an accrual basis.

Derivative financial instruments

Swissgrid may use derivative financial instruments to hedge against currency and market price risks. If the conditions are met, Swissgrid will apply hedge accounting to hedge expected future cash flows. The instruments used for this purpose will be disclosed in the notes to the financial statements until the underlying transaction is realised.

2. Estimation uncertainty

Financial-statement reporting requires estimates and assumptions to be made that may have a significant impact on Swissgrid's financial statements. With respect to assets and liabilities recognised in the balance sheet, accruals and deferrals (prepaid expenses and accrued income/acrued expenses and deferred income) and volume- and tariff-related timing differences in particular are based on various assumptions and estimates that may necessitate significant adjustments. This is due to specific volumes not being available for certain revenue and procurement items when the financial statements are prepared, as well as regulatory uncertainties. The volume- and tariff-related timing differences are also influenced by estimates in the allocation of operating expenses to the segments.

For more information on this, the reader is referred to the comments in the sections on «Revenue recognition» and «Activities according to StromVG» in Note 1, as well as the comments in Note 24.

3. Net turnover and procurement costs

Net turnover

For the 2021 financial year, net turnover across all segments amounts to CHF 715.1 million. This represents an increase of CHF 126.9 million in relation to the previous year's figure of CHF 588.2 million. The rise in turnover is predominantly due to the CHF 65.3 million increase in tariff revenue as well as higher income from auctions for the reduction of chargeable grid costs of CHF 61.1 million in the grid utilisation segment. In addition, the general ancillary services segment recorded growth in income of CHF 28.9 million from balance group balance energy. By contrast, tariff income in the active power loss segment decreased by CHF 29.0 million.

Procurement costs

At CHF 417.5 million, procurement costs are CHF 189.0 million higher than the previous year's value of CHF 228.5 million. This increase is primarily due to higher costs of CHF 161.4 million for control power

provision and AS energy in the general ancillary services segment as well as higher procurement costs of CHF 23.3 million for active power loss. The increase in these costs is primarily due to rising electricity prices in the second half of 2021. In the grid utilisation segment, additional remuneration to former transmission system operators rose by CHF 24.6 million compared to the previous year. By contrast, national redispatch costs in the grid utilisation segment and expenses for grid enhancement in the general ancillary services segment decreased by CHF 13.4 million and CHF 5.4 million respectively in relation to 2020.

More detailed comments on the individual segments, including the effects on the volume- and tariff-related timing differences, can be found in Note 4 to the financial statements in accordance with Swiss GAAP FER.

4. Other operating income

In millions of CHF	2021	2020
Congestion management clearing	15.6	12.4
Other	1.5	2.1
	17.1	14.5

5. Materials and third-party supplies

In millions of CHF	2021	2020
Grid maintenance	19.1	19.1
Grid system control	0.4	0.4
Other services in the grid area	23.7	31.5
Expenses for projects, advisory and non-cash benefits	38.7	32.4
Hardware/software maintenance	12.6	11.1
	94.5	94.5

Other grid-related services include remuneration for easements, including easement management services performed by third parties and operating expenses for mixed-use plants. The number of easements for which Swissgrid pays remuneration to the property owners and therefore also the other services in the grid area item decreased compared to the previous year. Due to the implementation of Strategy 2022 measures, the expenses for projects, advisory services and non-cash benefits were higher year on year.

6. Personnel expenses

In millions of CHF	2021	2020
Salaries, bonuses, allowances	84.9	81.5

In millions of CHF	2021	2020
Employee insurance	17.2	16.3
Other personnel expenses	3.8	3.7
	105.9	101.5

Other personnel expenses include, in particular, the costs of training and further education, recruitment, lump-sum expenses as well as allowances for external catering for employees.

The average number of full-time equivalents exceeded 250 in the reporting period, as was the case in the previous year.

7. Other operating expenses

In millions of CHF	2021	2020
Rental and occupancy costs	9.4	8.7
Ground rents	4.8	6.5
Rental costs for communication equipment/telecommunication expense	3.2	3.1
Board of Directors' fees and expenses, incl. social costs	0.8	0.8
Actual expenses for travel and subsistence for employees and third parties	0.8	0.9
Fees, dues and licences	4.1	4.4
Insurance	1.8	1.4
Other administrative costs	3.1	3.0
	28.0	28.8

Board of Directors' fees and expenses represent fixed gross remuneration. The remuneration paid to the Chairman of the Board of Directors amounted to CHF 250,000, including lump-sum expenses (previous year: CHF 250,000). The remaining members of the Board of Directors received remuneration of between CHF 57,500 and CHF 70,000 pro rata temporis for 2021, including lump-sum expenses (previous year: CHF 57,500 to CHF 70,000).

Further information on the members of the Board of Directors can be found in the Corporate Governance Report.

8. Trade receivables

As at 31 December 2021, trade receivables include CHF 55.5 million (previous year: CHF 23.1 million) in relation to companies with a direct or indirect shareholding in Swissgrid.

9. Other receivables

In particular, other receivables include the receivable for the 2021 enforcement costs for handling congestion management amounting to CHF 15.6 million (previous year: CHF 12.4 million) and VAT credit of CHF 2.0 million (previous year: VAT liability of CHF 0.4 million).

10. Prepaid expenses and accrued income

In millions of CHF	31.12.2021	31.12.2020
Accrued revenue for supplies made	57.7	41.4
Other	23.4	25.5
	81.1	66.9

In particular, other prepaid expenses and accrued income include the discount on bond issues and financing and issue costs, which are amortised over the term of the financing instrument.

11. Balance sheet items held on a fiduciary basis

Pursuant to the EICom ruling issued on 6 April 2020, income from auctions in 2021 amounting to CHF 97.1 million (previous year: CHF 71.1 million) was paid to Swissgrid. At CHF 137.8 million, the balance sheet item is CHF 113.9 million above the previous year's value of CHF 23.9 million. This is primarily due to the CHF 33.5 million increase in unused income from auctions as well as the higher level of outstanding trade accounts receivable and trade accounts payable as at 31 December 2021.

As of the balance sheet date, derivative financial instruments (futures) in the nominal amount of EUR 43.0 million exist to partially hedge against the EUR/CHF currency risk from expected future income in euros. The positive replacement values as at 31 December 2021 amount to CHF 2.2 million (previous year: negative replacement values of CHF 1.0 million).

12. Shareholdings

		Share capital in m.	Share in %
Joint Allocation Office (JAO)	B	0.100	5.0
TSCNET Services GmbH	C	0.038	6.7

Due to changes in ownership, Swissgrid's share in TSCNET Services GmbH and Equigy B.V. has decreased to 6.7% and 20.0% respectively. Swissgrid is not legally obliged to prepare consolidated financial statements. Either the control principle necessary to prepare a consolidated financial statement (Art.963 of the Swiss Code of Obligations (CO)) is not met, or the subsidiaries do not have a material influence on Swissgrid's financial statements. In particular, Pronovo AG is regulated by the Swiss Federal Office of Energy (SFOE) and is explicitly excluded from any consolidation with Swissgrid based on Art.64(5) of the Energy Act (EnG).

Otherwise, the information is unchanged from the previous year.

13. Property, plant and equipment

The book values of the individual categories are as follows:

In millions of CHF	31.12.2021	31.12.2020
Construction in progress	457.0	320.2
Substations	712.2	753.3
Lines	978.5	1,005.1

125 million	0,050%	2019 - 2050	30.06.2050

Convertible loans and loans

Convertible loans have a term of nine years and one-fifth of the loans become payable annually from year five. Partial repayments of convertible loans amounting to CHF 170.9 million were made in the

2021 financial year. Moreover, loans are also assigned a conversion right by Swissgrid in the event of occurrence of contractually defined events and an associated conversion obligation by the creditors. Creditors are compensated by a premium on the interest rate for the conversion right assigned to Swissgrid. Convertible loans are recognised in full in liabilities.

The interest conditions and maturities of convertible loans and loans are as follows:

Loans and convertible loans

Position	Interest rate (bandwidth)	Year 1	Year 2–5	More than 5 years
Convertible loans	3.36 - 3.93%	254.6	68.3	3.8
Loans	0.00%	–	–	0.1

Convertible loans and loans are assessed at their nominal value.

As at 31 December 2021, convertible loans of CHF 220.9 million (previous year: CHF 253.2 million) exist towards companies with a direct or indirect shareholding in Swissgrid.

19. Provisions

In millions of CHF	31.12.2021	31.12.2020
Dismantling	6.1	6.1
Procedural costs	0.5	2.9
Total provisions	6.6	9.0
Current portion	0.2	2.2

Procedural costs

With the grid takeovers on 3 January 2013 and 5 January 2015 and the associated spin-offs of the procedural companies from the grid companies, contractual regulations mean that Swissgrid is responsible for the costs of proceedings attributable to the procedural companies. The provision as at 31 December 2021 includes the remaining expected expenses for party, court and legal costs due to the final remuneration for the grid takeovers paid in 2021.

The provision amount also includes the estimated compensation payable to parties and the court costs imposed on Swissgrid due to the administrative procedures in conducting proceedings.

20. Share capital and reserves from capital contributions

The share capital consists of 334,495,151 (previous year: 320,398,149) fully paid-up registered shares with a par value of CHF 1 per share.

21. Derivative financial instruments

Swissgrid made use of derivative financial instruments to partially hedge against market price risk from future procurement costs for active power losses. The nominal amount of these instruments is EUR 36.1 million (previous year: EUR 18.3 million), with positive replacement values of EUR 13.4 million as at 31 December 2021 (previous year: negative replacement values of EUR 1.5 million).

22. Contingent receivables

Billing method for ancillary services (AS)

EICom defined the billing method for the AS surcharge in its 4/2018 directive. Under this method, Swissgrid and the distribution system operators wait until the subsequent year to finally settle payments of AS tariffs for the previous financial year.

The settlement will result in receivables owed to Swissgrid by the distribution system operators. However, since the amount of these receivables could not be reliably determined when the financial statements were prepared, they were recognised as contingent receivables.

23. Other off-balance sheet commitments

Joint Allocation Office (JAO)

As a shareholder of the Joint Allocation Office (JAO), Swissgrid is contractually obliged to assume its share of the annual costs.

TSCNET Services GmbH

As a shareholder of TSCNET Services GmbH, Swissgrid is contractually obliged to assume its share of the annual costs.

Equigy B.V.

As a shareholder of Equigy B.V., Swissgrid is contractually obliged to assume its share of the annual costs.

Off-balance-sheet lease commitments

Swissgrid has the following off-balance-sheet lease commitments for vehicles and office equipment:

Lease commitments

In millions of CHF	Year 1	Year 2-5	Total
31.12.2021	0.8	1.6	2.4
31.12.2020	0.8	1.2	2.0

Long-term rental contracts

Long-term rental contracts with fixed terms exist with several parties. These result in the following obligations:

In millions of CHF	Year 1	Year 2–10	More than 10 years	Total
31.12.2021	5.8	36.5	64.3	106.6
31.12.2020	6.0	38.3	68.3	112.6

The long-term rental obligations primarily include the rental commitments for Swissgrid's head office in Aarau.

24. Legal proceedings

Swissgrid's legal mandate and business activities expose the company to costs that can be passed on to the lower grid levels and end consumers in the form of tariff revenues if ECom deems the costs to be chargeable. ECom has the right to verify ex post the chargeability of Swissgrid's costs for tariff-setting purposes.

At present, ECom has not initiated any proceedings to examine Swissgrid's chargeable costs. Swissgrid's Board of Directors and Executive Board believe that all costs were incurred within the framework of Swissgrid's legal mandate and should therefore qualify as chargeable. Based on this assessment, Swissgrid has treated all operating and capital costs as chargeable and consequently recognised them in full in the volume- and tariff-related timing differences. If, contrary to Swissgrid's assessment, the costs claimed are ruled to be non-chargeable, this would be reflected in future financial statements.

Third-party proceedings

The financial impact of third-party proceedings in which Swissgrid is involved are included in Swissgrid's financial statements if the Swiss GAAP FER criteria for recognition have been met. However, they have no direct impact on Swissgrid's results as they are included in the volume- and tariff-related timing differences.

25. Audit fees

In 2021, the fees for audit services amount to CHF 213,000 (previous year: CHF 214,000) and CHF 10,000 (previous year: CHF 3,000) for other services.

26. Events after the balance sheet date

There are no events after the balance sheet date that would require disclosure or recognition in the 2021 financial statements.

On 26 April 2022, the Board of Directors of Swissgrid Ltd approved the 2021 financial statements for submission to the General Assembly and for publication.

Statutory financial statements

Proposed appropriation of retained earnings

The Board of Directors proposes to the General Assembly that the retained earnings be appropriated as follows:

CHF	2021	2020
Balance carried forward from the previous year	399,085,757.72	365,815,233.71
Profit for the year	104,716,744.90	71,138,387.07
Retained earnings	503,802,502.62	436,953,620.78
Appropriation to the general legal reserves	–	–
Dividend payment	53,110,767.99	37,867,863.06
Balance to be carried forward	450,691,734.63	399,085,757.72
Total appropriation	503,802,502.62	436,953,620.78

Since legal capital reserves and legal retained earnings have reached 50% of the share capital, no more funds will be allocated to these accounts.

Aarau, 26 April 2022

On behalf of the Board of Directors:

Adrian Bult, Chairman

Statutory financial statements

Statutory Auditor's Report

Statutory Auditor's Report

To the General Meeting of Swissgrid Ltd, Aarau

Report on the Audit of the Financial Statements

Opinion

We have audited the financial statements of Swissgrid Ltd, which comprise the balance sheet as at 31 December 2021, the income statement and statement of cash flow for the year then ended, and notes to the financial statements, including a summary of significant accounting policies.

In our opinion the financial statements (pages 62 to 79) for the year ended 31 December 2021 comply with Swiss law and the company's articles of incorporation.

Basis for Opinion

We conducted our audit in accordance with Swiss law and Swiss Auditing Standards. Our responsibilities under those provisions and standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the entity in accordance with the provisions of Swiss law and the requirements of the Swiss audit profession and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Report on Key Audit Matters based on the circular 1/2015 of the Federal Audit Oversight Authority

Accuracy of the calculation of the regulated EBIT and volume- and tariff-related timing differences

Completeness and accuracy of the net turnover and procurement costs

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Key Audit Matter

Our response

For the 2021 financial year Swissgrid reports an EBIT (earnings before interest and taxes) of CHF 183.1 million. The change in volume- and tariff-related timing differences amounts to CHF +260.0 million.

The EBIT presented in Swissgrid's financial statements is legally defined as the multiplication of the invested operating assets (regulatory asset base, "RAB") and volume- and tariff-related timing differences by the applicable regulatory interest rates plus taxes. The RAB consists of the transmission grid assets (incl. construction in progress), the intangible assets and the net current assets determined on a monthly basis.

Cost and volume variances between the actual costs and income for a year and the costs and income predetermined in advance at tariff level for the same year lead to so-called volume- and tariff-related timing differences. These are deferred separately as surpluses or deficits in the balance sheet and must be amortized over the coming years. The yearly change is recorded separately in the income statement under "Change in volume- and tariff-related timing differences".

There is a risk that the EBIT and the volume- and tariff-related timing differences are not calculated according to the applicable legal and regulatory provisions and that, consequently, the EBIT and the volume- and tariff-related timing differences are not presented correctly in the financial statements.

For further information on the calculation of the regulated EBIT and volume- and tariff-related timing differences refer to the notes of the financial statements under note "1. Accounting principles" (Activities according to StromVG) as well as under note "24. Legal proceedings".

We have performed mainly the following audit procedures:

- Identification of the key controls and verification of their effectiveness using sampling;
- Reconciliation of the method used for calculating the regulated EBIT and volume- and tariff-related timing differences with the legal, administrative and regulatory requirements;
- Recalculation of the interest on the various components of the RAB and volume- and tariff-related timing differences using the interest rates according to the legal base (StromVG/StromVV) as well as to the decisions and directives of the Swiss Federal Electricity Commission (ElCom) and comparison with the recorded values;
- Evaluation of the completeness and transparency of the disclosures presented in the financial statements.

Completeness and accuracy of the net turnover and procurement costs

Key Audit Matter

For the 2021 financial year Swissgrid reports a net turnover of CHF 715.1 million and the procurement costs amount to CHF 417.5 million.

The calculation of the net turnover (performance) and procurement costs is based mainly on the energy data directly metered on the transmission system or reported from downstream grid levels. For the measurement of performance, regulated tariffs must mainly be taken into account; for the procurement costs the applicable market prices.

Swissgrid's regulated activities are characterized by a high volume of IT-based transactions.

For certain turnover and procurement costs positions, no volume base exists at the closing date yet, which requires to make estimates and assumptions.

Due to the transaction volume, the various IT interfaces and the estimates / assumptions, there is a risk that the performance and costs are not calculated completely and correctly.

For further information on the net turnover and the procurement costs refer to the notes of the financial statements under note "2. Estimation uncertainty" and under note "3. Net turnover and procurement costs".

Our response

We have analyzed the process relative to the calculation of the net turnover and procurement costs and we have determined whether the energy data have been recorded completely and correctly. In this respect, we have among others identified the key controls and we have then verified their effectiveness using sampling. We have considered the high degree of integration of the provision and recording of services by the various IT systems by testing the effectiveness of the general IT controls and application controls of the relevant IT systems for accounting purposes with the assistance of our IT specialists.

In order to assess the completeness and accuracy, we have also critically examined the main assumptions and evaluated the accuracy of the forecasts regarding the presented accruals, in particular by comparing retrospectively the accrued amounts and the actual amounts.

Furthermore, we have assessed the appropriateness of the disclosures in the financial statements concerning the corresponding positions of the balance sheet and income statement.

Responsibility of the Board of Directors for the Financial Statements

The Board of Directors is responsible for the preparation of the financial statements in accordance with the provisions of Swiss law and the company's articles of incorporation, and for such internal control as the Board of Directors determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors is responsible for assessing the entity's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors either intends to liquidate the entity or to cease operations, or has no realistic alternative but to do so.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Swiss law and Swiss Auditing Standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with Swiss law and Swiss Auditing Standards, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made.
- Conclude on the appropriateness of the Board of Directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the entity's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the entity to cease to continue as a going concern.

We communicate with the Board of Directors or its relevant committee regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the Board of Directors or its relevant committee with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the Board of Directors or its relevant committee, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report, unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on Other Legal and Regulatory Requirements

In accordance with article 728a para. 1 item 3 CO and the Swiss Auditing Standard 890, we confirm that an internal control system exists, which has been designed for the preparation of financial statements according to the instructions of the Board of Directors.

We further confirm that the proposed appropriation of available earnings complies with Swiss law and the company's articles of incorporation. We recommend that the financial statements submitted to you be approved.

Corporate Governance

The Board of Directors and Executive Board of Swissgrid Ltd (Swissgrid) place great importance on good corporate governance. The following statements are based on the Swiss Code of Best Practice for Corporate Governance. All information relates to the reporting date of 31 December 2021, unless specified otherwise.

Corporate structure and shareholders

Corporate structure

Swissgrid's corporate structure is shown below:

The shareholdings of Swissgrid are listed in paragraph 13 of the notes on the statutory financial statements. Swissgrid holds 100% of the shares in the non-consolidated subsidiary Pronovo AG. In accordance with Art. 64 of the Energy Act, Pronovo AG is the responsible enforcement agency for guarantees of origin, the feed-in tariff system (FTS and CRF), one-off remuneration activities and additional cost financing. It is also responsible for the collection of grid premiums in this respect. Pronovo AG prepares separate annual reports, which can be accessed at www.pronovo.ch.

Shareholders

The following companies are Swissgrid shareholders as at 31 December 2021: Aare Versorgungs AG (AVAG), AEK Energie AG, Alpiq Suisse SA, Axpo Power AG, Axpo Solutions AG, Azienda elettrica ticinese, Aziende Industriali di Lugano (AIL) SA, BKW Energie AG, BKW Netzbeteiligung AG, Centralschweizerische Kraftwerke AG, Electra-Massa AG, Elektrizitätswerk der Stadt Zürich, Elektrizitätswerk Obwalden, EnAlpin AG, Engadiner Kraftwerke AG, FMV SA, Forces Motrices de

Mauvoisin SA, Forces Motrices Hongrin-Léman S.A. (FMHL), General Electric Technology GmbH, Grande Dixence SA, IWB Industrielle Werke Basel, Kraftwerke Hinterrhein AG, Kraftwerke Linth-Limmern AG (KLL), Kraftwerke Mattmark AG, Kraftwerke Oberhasli AG, Kraftwerke Sarganserland AG (KSL), Kraftwerke Vorderrhein AG (KVR), Nant de Drance SA, Officine Idroelettriche della Maggia SA, Officine idroelettriche di Blenio SA, Repower AG, SIRESO Société d'Investissement de Suisse occidentale SA and SN Energie AG. Together, they hold 100% of Swissgrid's share capital as at 31 December 2021. Swissgrid is directly or indirectly majority-owned by the cantons and the municipalities. The current shareholder structure can be viewed online at www.swissgrid.ch.

Cross shareholdings

No cross shareholdings currently exist.

Swissgrid ownership structure

As at 31 December 2021 (all figures rounded)

Capital structure

Capital and restriction on transferability

The ordinary share capital as at 31 December 2021 consists of 334,495,151 registered shares with a nominal value of CHF 1 per share (divided into 167,247,576 A registered shares and 167,247,575 B registered shares). The conditional share capital as at 31 December 2021 consists of a maximum of 112,939,487 fully paid-up registered shares (half A registered shares and half B registered shares), each with a nominal value of CHF 1. The conditional share capital relates to received convertible bonds that Swissgrid used to finance the transfer of the transmission grid. Creditors can exercise conversion rights over a maximum of 20 years. Shareholders have no pre-emptive rights. Shareholder advance subscription rights are also excluded, as the convertible bonds are financing the takeover of grid companies transferred as contributions in kind or individual system elements, or the simple and rapid improvement of Swissgrid's capital resources.

Following issuance of the corresponding rulings by ElCom, the definitive valuation adjustment of the transmission grid systems handed over to Swissgrid led to an overall positive change in value, for which the previous owners were compensated for the investment in their transmission grid systems with 30% of the value in Swissgrid shares and 70% of the value in a loan claim against Swissgrid. In exchange, in connection with the existing conditional capital, new Swissgrid shares with a par value of CHF 14,097,002 were issued (half A registered shares and half B registered shares) and recorded in the commercial register on 26 November 2021.

No authorised capital exists. According to Art. 18 Para. 5 of the Electricity Supply Act, the company's shares may not be listed on a stock exchange. The Board of Directors maintains a share register listing the names and addresses of the owners and beneficiaries. Only shareholders or beneficiaries listed in the share register are recognised by the company and are authorised to exercise their shareholder rights. The status of the entries in the share register on the 20th day prior to the General Assembly is decisive for determining entitlement to participation and representation at the General Assembly. According to Art. 18 Para. 3 of the Electricity Supply Act, the majority of the share capital and the associated voting rights must be directly or indirectly held by the cantons and municipalities. In the event of share transfers (sale, gift, exercise of pre-emptive rights and purchase rights, etc.), these majorities must be retained. If an intended transaction breaches one of these majority ownership requirements, the Board of Directors must not grant its approval.

There are no participation or profit-sharing certificates and no options were issued.

Capital changes

Further information on the share capital and capital changes in the last two years is shown in the statement of changes in equity in the Swiss GAAP FER financial statements.

Board of Directors

Members of the Board of Directors, additional activities and affiliations

From top left to bottom right: Adrian Bult, Isabelle Moret, Markus Kägi, Kerem Kern, Benedikt Loepfe, Claude Nicati, Roberto Pronini, Regula Wallimann, Stefan Witschi

Adrian Bult

Chairman, independent member
Born in 1959, Swiss

Adrian Bult, lic. oec., has been a member of the Swissgrid Board of Directors since 2006 and its Chairman since 2012. From 2007 to 2012, he was a member of the Executive Board (COO) at Avaloq Evolution AG. Until 2007, he was the Head of IT Telecom PTT and was later a member of the Group management of Swisscom, initially as CIO, then as CEO Swisscom Fixnet and finally as CEO Swisscom Mobile. Before this, he sat on the Executive Board of IBM Switzerland.

Affiliations President of the Bank Council at Basler Kantonalbank; Chairman of the Board of Directors at AdNovum AG, Nevis Security AG, GARAIO REM AG and Amrop Executive Search AG; member of the Board of Directors at Alfred Müller AG and SWICA.

Isabelle Moret

Vice Chairwoman, independent member, born in 1970, Swiss

Isabelle Moret, lic. jur., LL.M, lawyer, has been a member of the Swissgrid Board of Directors since 2012. She is an independent legal counsel. She has been a member of the National Council since 2006 and was its Chairwoman in 2019/2020. Prior to this, she was a member of the Grand Council of the Canton of Vaud and from 2008 to April 2016 Vice Chairwoman of the liberal party FDP.

Affiliations

Member of the Executive Committee of economiesuisse (Swiss Business Federation), Chairwoman of the Federation of Swiss Food Industries (fial) and of H+, the association of Swiss hospitals; member of the Board of Directors at Interregionale Blutspende SRK AG and solutions tarifaires suisses sa; foundation board member at EPFL-WISH Foundation; member of the Council of the Swiss Abroad.

Markus Kägi

Board of Directors, cantonal representative, born in 1954, Swiss

Markus Kägi, member of the Zurich Notary Bar, has been a member of the Swissgrid Board of Directors since 2019. From 2007 to 2019, he served as a Councillor of the Canton of Zurich and Head of the Building Department. In 2012/2013 and 2017/2018, he also served as President of the Government of the Canton of Zurich. Prior to this, from 1996 to 2007, he was the ombudsman for the Canton of Zurich and, from 2005 to 2007, Chairman of the European Ombudsman Institute. From 1991 to 1996, he was

a member of the Cantonal Council of Zurich, taking over as Chairman in 1995/1996.

Resignations in the reporting period

Marcel Frei, as at 18 May 2021
Ronald Trächsel, as at 18 May 2021

New elections in the reporting period

Benedikt Loepfe, as at 18 May 2021
Roberto Pronini, as at 18 May 2021
Stefan Witschi, as at 18 May 2021

Election and term of office

The Board of Directors is comprised of at least three elected members. The majority of members and the Chairman must meet independence requirements in accordance with Art. 18 Para. 7 of the Electricity Supply Act. As a rule, the Board of Directors is elected at the Annual General Assembly for one year at a time. The term of office for the members of the Board of Directors ends on the day of the next Annual General Assembly. All cantons together have the right to delegate and recall two members to/from the company's Board of Directors (Art. 18 Para. 8 of the Electricity Supply Act). The members of the Board of Directors can be re-elected at any time. The Board of Directors is self-constituting. It nominates its Chairman, Vice Chairwoman and the Secretary, who does not have to be a member of the Board of Directors.

Internal organisation

The Board of Directors is responsible for the overall management of the company and for supervising the management of the company. It represents the company externally and takes care of all matters that are not assigned to another corporate body according to law, regulations or the Articles of Incorporation. The Board of Directors can, subject to the legal guidelines on independence (Art. 18 Para. 7 of the Electricity Supply Act), transfer the management of the company or individual parts thereof as well as the representation of the company to one or more persons, members of the Board of Directors or third parties, who do not have to be shareholders. It issues the organisational regulations and arranges the corresponding contractual relationships. The powers of the Board of Directors and the Executive Board are defined in the organisational regulations. The members of the Board of Directors do not exercise any executive roles within Swissgrid. The Board of Directors met ten times during the last financial year.

Board committees

In order to incorporate the specialist knowledge and broad range of experience of the individual members in the decision-making process, or to report as part of its supervisory duty, the Board of Directors formed three committees to assist in management and control activities in close collaboration with the Executive Board: the Strategy Committee, the Finance and Audit Committee, and the Staff and Compensation Committee. The tasks and powers of the Board committees are set out in detail in the organisational regulations.

Strategy Committee

The Strategy Committee supports the Board of Directors in the strategy process. It advises on the strategic principles on behalf of the Board of Directors and reviews the strategy for the Board of Directors on a regular basis. The committee presents its view on proposals that relate to strategic issues. The Strategy Committee met four times during the last financial year.

Members:

- Adrian Bult (Chairman, since 2012)
- Kerem Kern (since 2017)
- Claude Nicati (since 2014)
- Roberto Pronini (since 18 May 2021)

Changes in the reporting period:

- Marcel Frei (resignation as at 18 May 2021)
- Roberto Pronini (new election as at 18 May 2021)

Finance and Audit Committee

The Finance and Audit Committee supports the Board of Directors in its supervisory role, i.e. with regard to the integrity of the accounts, the fulfilment of legal provisions, and the competence and services of the external auditors. The Finance and Audit Committee assesses the suitability of financial reporting, the internal control system and the general monitoring of business risks. It ensures that there is ongoing communication with the external auditors concerning the financial position and the course of business. It supervises the Internal Audit division's work. It makes the necessary preparations relating to the appointment or discharge of external auditors and the organisation and management of the Internal Audit division. The Finance and Audit Committee met five times during the last financial year.

Members:

- Regula Wallimann (Chairwoman, since 2017)
- Adrian Bult (since 18 May 2021)
- Stefan Witschi (since 18 May 2021)

Changes in the reporting period:

- Adrian Bult (transfer from the Staff and Compensation Committee as at 18 May 2021)
- Ronald Trächsel (resignation as at 18 May 2021)
- Stefan Witschi (new election as at 18 May 2021)

Staff and Compensation Committee

The Staff and Compensation Committee draws up principles for all compensation components of the members of the Board of Directors, the CEO and the members of the Executive Board, and submits a proposal to the Board of Directors accordingly. The committee defines the compensation of the CEO and the members of the Executive Board. The basis for this decision is the compensation concept approved by the Board of Directors. The committee presents its view on the changes to the Executive Board that are proposed by the CEO. It also ensures that succession planning is in place for the Board of Directors and the Executive Board. The Staff and Compensation Committee met four times during the last financial year.

Members:

- Isabelle Moret (Chairwoman, since 2014)
- Markus Kägi (since 2019)
- Kerem Kern (since 2018)
- Benedikt Loepfe (since 18 May 2021)

Changes in the reporting period:

- Adrian Bult (transfer to the Finance and Audit Committee as at 18 May 2021)
- Benedikt Loepfe (new election as at 18 May 2021)

Ad hoc committees

The Board of Directors may appoint ad hoc committees for specific tasks. It did not set up any such committee in the last financial year.

Information and control instruments with regard to the Executive Board

Information and control instruments

The Board of Directors has the following instruments for monitoring and supervising the Executive Board:

- At Board meetings, the Executive Board presents and comments on business performance and submits all important issues for discussion or resolution.
- A report to the Board of Directors is compiled quarterly, and contains key figures on business performance together with comments from the Executive Board.
- The written CEO report is submitted at every ordinary Board meeting and also deals with recurring issues, such as the ancillary services reports, grid construction projects, developments in the energy sector in Switzerland and Europe and key performance indicators (KPI).
- The risk report is discussed with and approved by the Board of Directors every six months.
- The auditor issues an annual written report for the Board of Directors (see also the comments in the external audit section).

Internal control system

The internal control system has an important role as part of corporate management and monitoring, and covers all procedures, methods and measures mandated by the Board of Directors and the Executive Board that serve to ensure the correct execution of the business processes with regard to financial management and accounting at Swissgrid. The internal operational controls are integrated into the operating procedures. They are implemented while work is being carried out or take place immediately before or after a procedure. Internal checks do not come under a separate function, but are integrated into the processes. The internal control system at Swissgrid is implemented at all levels of the organisation and demands a high level of personal responsibility from employees.

Internal Audit

The Internal Audit division reports to the Board of Directors, while its activities are monitored by the Finance and Audit Committee. The Internal Audit division supports the Board of Directors and, in particular, the Finance and Audit Committee with independent audits and advice. It gives the Board of Directors and the Finance and Audit Committee assurance that corporate governance is undertaken, that processes are complied with and that weaknesses are identified. The duties, powers and responsibilities of the Internal Audit division are regulated in separate regulations. The Board of Directors approves the Internal Audit division's audit planning annually upon request by the Finance and Audit Committee. The Internal Audit division pursues a risk-based audit approach. The Internal Audit division's audit results are dealt with at the Finance and Audit Committee meetings on an ongoing basis. The Finance and Audit Committee is informed of findings as well as any associated recommendations and measures at the meetings. The Internal Audit division also maintains a follow-up process to monitor and ensure that the agreed actions are implemented in a timely and effective manner. The Internal Audit division performed nine audits during the year under review. In addition, the Internal Audit division submits an annual Activity report to the Board of Directors.

Risk management

Risk management is an integral part of effective and prudent corporate management for Swissgrid. Swissgrid's risk management covers the entire organisation, not including its subsidiaries and shareholdings, takes account of established standards (ISO 31000, COSO Enterprise Risk Management Framework) and satisfies the internal requirements of corporate governance as well as the requirements under Swiss law. Additional information on the implementation of the risk assessment can be found in the Management Report.

Executive Board

Members of the Executive Board, additional activities and affiliations

From top left to bottom right: Yves Zumwald, Doris Barnert, Maurice Dierick, Adrian Häsler, Konrad Zöschg

Yves Zumwald

CEO, born in 1967, Swiss

Yves Zumwald, Dipl.-Ing., Dipl. NDS EPF in energy, has been CEO of Swissgrid since March 2016. From 2014 to March 2016, he was a member of the Executive Board and Head of Grid Operations. From 2009 to 2014, he was a Board member and Director of the Sales division at the Romande Énergie Group. Before this, he worked at EOS Holding (Énergie Ouest Suisse), where he was responsible for grid usage and grid access, before serving as a member of the Executive Board with responsibility for the Infrastructure department at EOS Réseau. Early on in his professional career, he worked at EOS and Orange Communications.

Affiliations Member of the Assembly of the European Network of Transmission System Operators (ENTSO-E), a member of the Supervisory Board and Compensation Committee of EPEX SPOT SE; Chairman of the Board of Directors of the procedural companies (see also paragraph 12 of the notes on the statutory financial statements).

Doris Barnert

CFO, Head of Corporate Services, born in 1969, Swiss

Doris Barnert, architect (ETH Zurich), holds a master's degree in Corporate Finance from the Institute of Financial Services Zug (IFZ) and an Executive MBA from the University of St. Gallen (HSG), and has been a member of the Executive Board since April 2017. From 2008 to 2017, she was the CFO and member of the Executive Board of Solothurner Spitäler AG. From 2006 to 2008, she was the Head of Finances for the Western Switzerland route in the SBB's Infrastructure division. Prior to this, she managed various projects in the Infrastructure division. She began her professional career in architecture.

Affiliations Member of the Board of Directors at Skyguide, member of the Supervisory Board at TSCNET Services GmbH; member of the Board of Directors of the procedural companies (see also paragraph 12 of the notes on the statutory financial statements).

Maurice Dierick

Head of Market, born in 1964, Dutch

Maurice Dierick, Dipl.Ing. Maschinenbau (graduate mechanical engineer), has been a member of the Executive Board since June 2016. Prior to this, he was the Head of the Grid Infrastructure department at Swissgrid. From 2012 to 2015, he worked on behalf of Ernst & Young at Western Power in Australia, among others. From 2004 to 2012, he worked as an independent consultant, sometimes in cooperation

with consulting companies such as Pöyry (now AFRY), supporting various transformation projects in the field of asset management at German, French and Swiss power supply companies. Before this, he worked as an engineer at major industrial companies in France and Germany until he switched to consulting in 1998, finally for Cap Gemini Ernst & Young in the Netherlands.

Affiliations Board member of the European Network of Transmission System Operators (ENTSO-E).

Adrian Häslar

Head of Grid Infrastructure, born in 1966, Swiss

Adrian Häslar, Dipl. Elektroingenieur (graduate electrical engineer) HTL, Executive MBA HSG, has been a member of the Executive Board since April 2019. Prior to this, he was the Head of the Grid Delivery department at Swissgrid. From 2007 to 2017, he was a member of the Hydropower Division management at Axpo Power AG and Head of the Technical Support business unit, which was responsible for planning, building and servicing hydropower plants. Prior to this, he headed the Secondary Systems department at Nordostschweizerische Kraftwerke AG for seven years. He started his career at Kraftwerke Oberhasli AG as the Head of Operational Management.

Affiliations Deputy Chairman of the Specialist Commission for High Voltage Issues.

Konrad Zöschg

Head of Technology, born in 1976, Swiss

Konrad Zöschg, Telecom Engineer HTL and Industrial Engineer FH, has been a member of the Executive Board since 2021. Before joining Swissgrid, he worked as Head ICT/CIO at Flughafen Zürich AG for seven years. Between 2005 and 2014, he held various management positions within IT there in the area of aviation, building and security systems. Earlier in his career, he gained international experience at Acterna and its successor company Nexus Telecom AG. In 2020, he was awarded the Swiss CIO Award as best CIO of the year.

Affiliations None.

Resignation in the reporting period

Rainer Mühlberger, Head of Technology, as at 31 July 2021

Appointment in the reporting period

Konrad Zöschg, Head of Technology, as at 1 August 2021

Remuneration

The members of the Board of Directors receive a fixed remuneration (fees and expenses) based on a sliding scale for the Chairman and the other Board members. Remuneration for the members of the Executive Board consists of a basic salary (including lump-sum expenses) and a variable salary component that is dependent on achieving company and personal targets. The amount of remuneration for members of the Executive Board is defined by the Staff and Compensation Committee within the framework defined by the Board of Directors. Payments to the Executive Board and the Board of Directors are disclosed in paragraphs 8 and 9 of the notes to the Swiss GAAP FER financial statements.

Rights of participation

Shareholders' rights to assets and rights of participation are governed by law and the Articles of Incorporation. The Articles of Incorporation can be viewed online at www.swissgrid.ch. There are no statutory regulations that differ from the legal provisions.

External audit

Mandate and fees

KPMG AG, Basel, acts as the statutory auditor for Swissgrid Ltd. The audit mandate was first awarded to KPMG for the 2005/2006 financial year (long year). The auditor in charge, Rolf Hauenstein, has been in the role since the 2015 financial year. The auditor is appointed at the General Assembly for a one-year term. For its function as auditor, KPMG received remuneration of CHF 215,000 for the last financial year. The total remuneration for additional services amounted to CHF 10,000.

Information instruments

Every year, the Finance and Audit Committee evaluates the effectiveness of the auditor. The members

of the committee use their knowledge and experience garnered from holding similar positions in other companies to evaluate the audit. They also base their evaluation on the documents provided by the auditor, such as the comprehensive report and the verbal and written statements on individual aspects in connection with accounting, the internal control system and the audit.
